

HWG UNIT 1 SG 1

Population

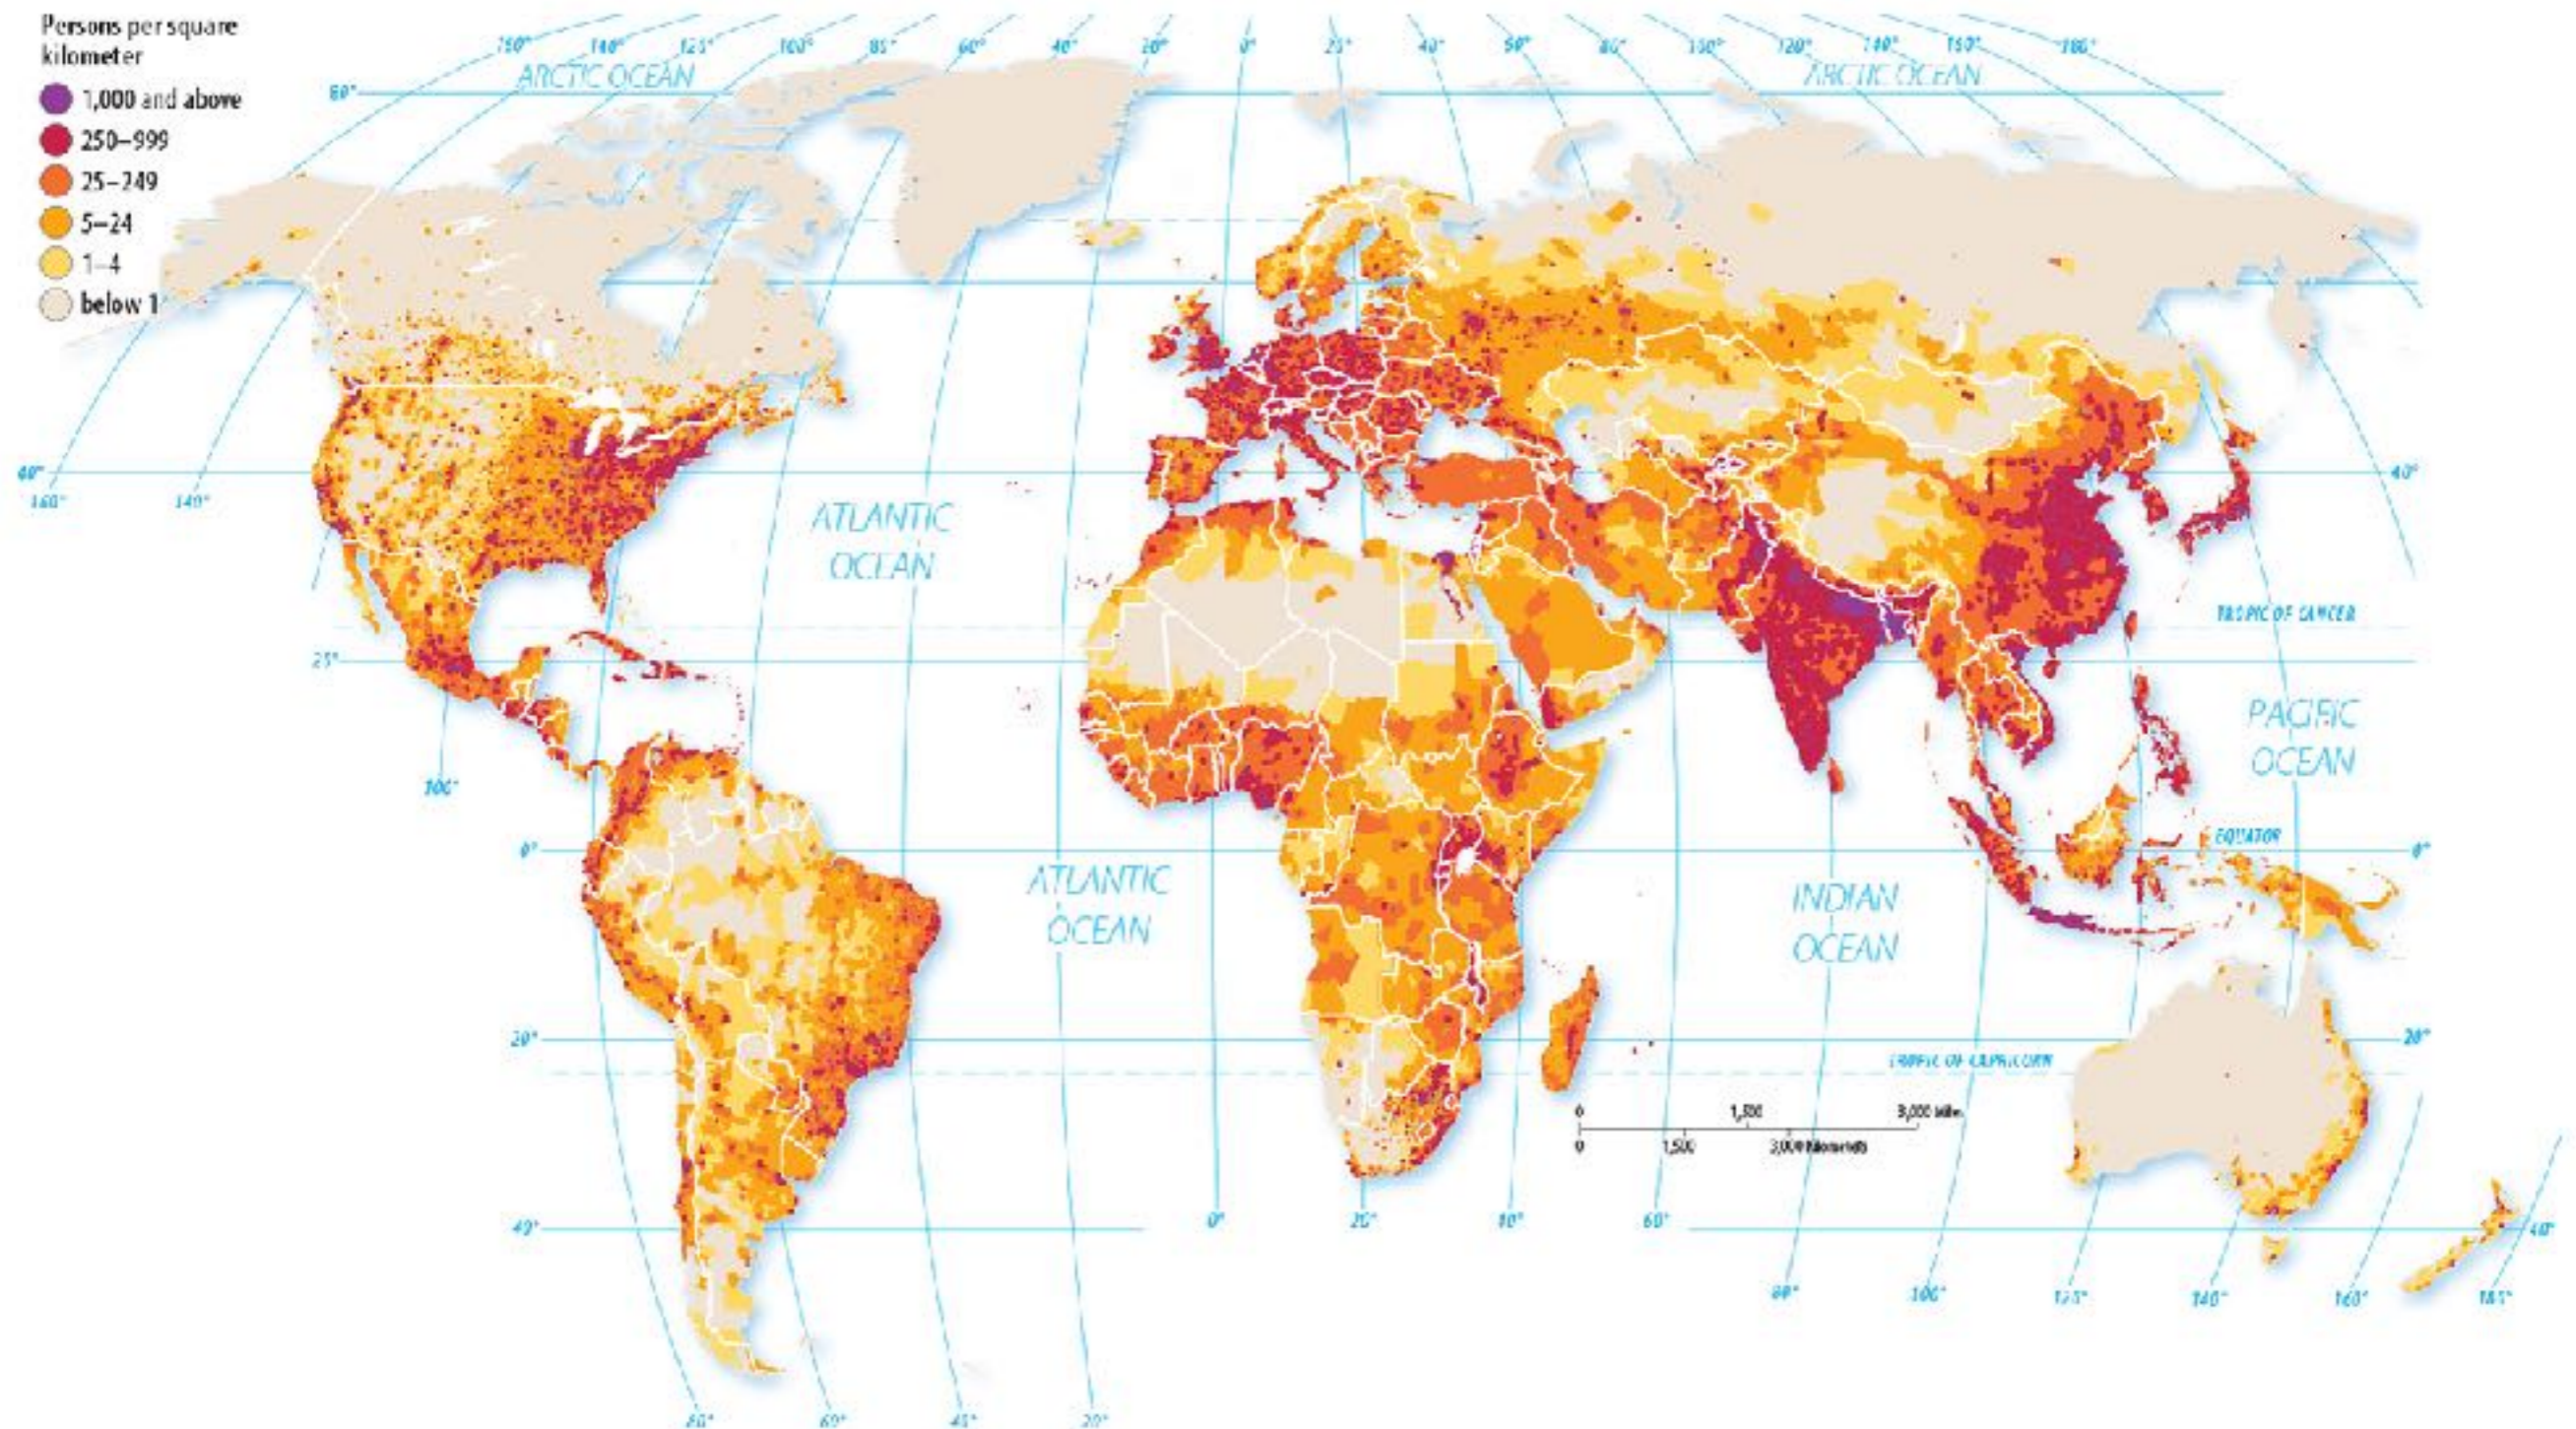

I. INTRODUCTION

A. The world population today is approximately 7 billion people, concentrated in a few regions of the world. More people are alive and living longer than any other time in the history of humankind.

WHAT IS THE IDEAL KIND OF PLACE TO LIVE?

- Temperature Ranges
- Humidity
- Rainfall
- Topography
- Access to Water

What Areas Are Humans Avoiding?

II. POPULATION CONCENTRATIONS

- A. Why are there sparsely populated regions?
- B. Humans avoid clustering in certain physical environments.
 - 1. Dry lands
 - 2. Cold lands
 - 3. Mountainous lands
 - 4. Lands that are too wet

POPULATION CLUSTERS

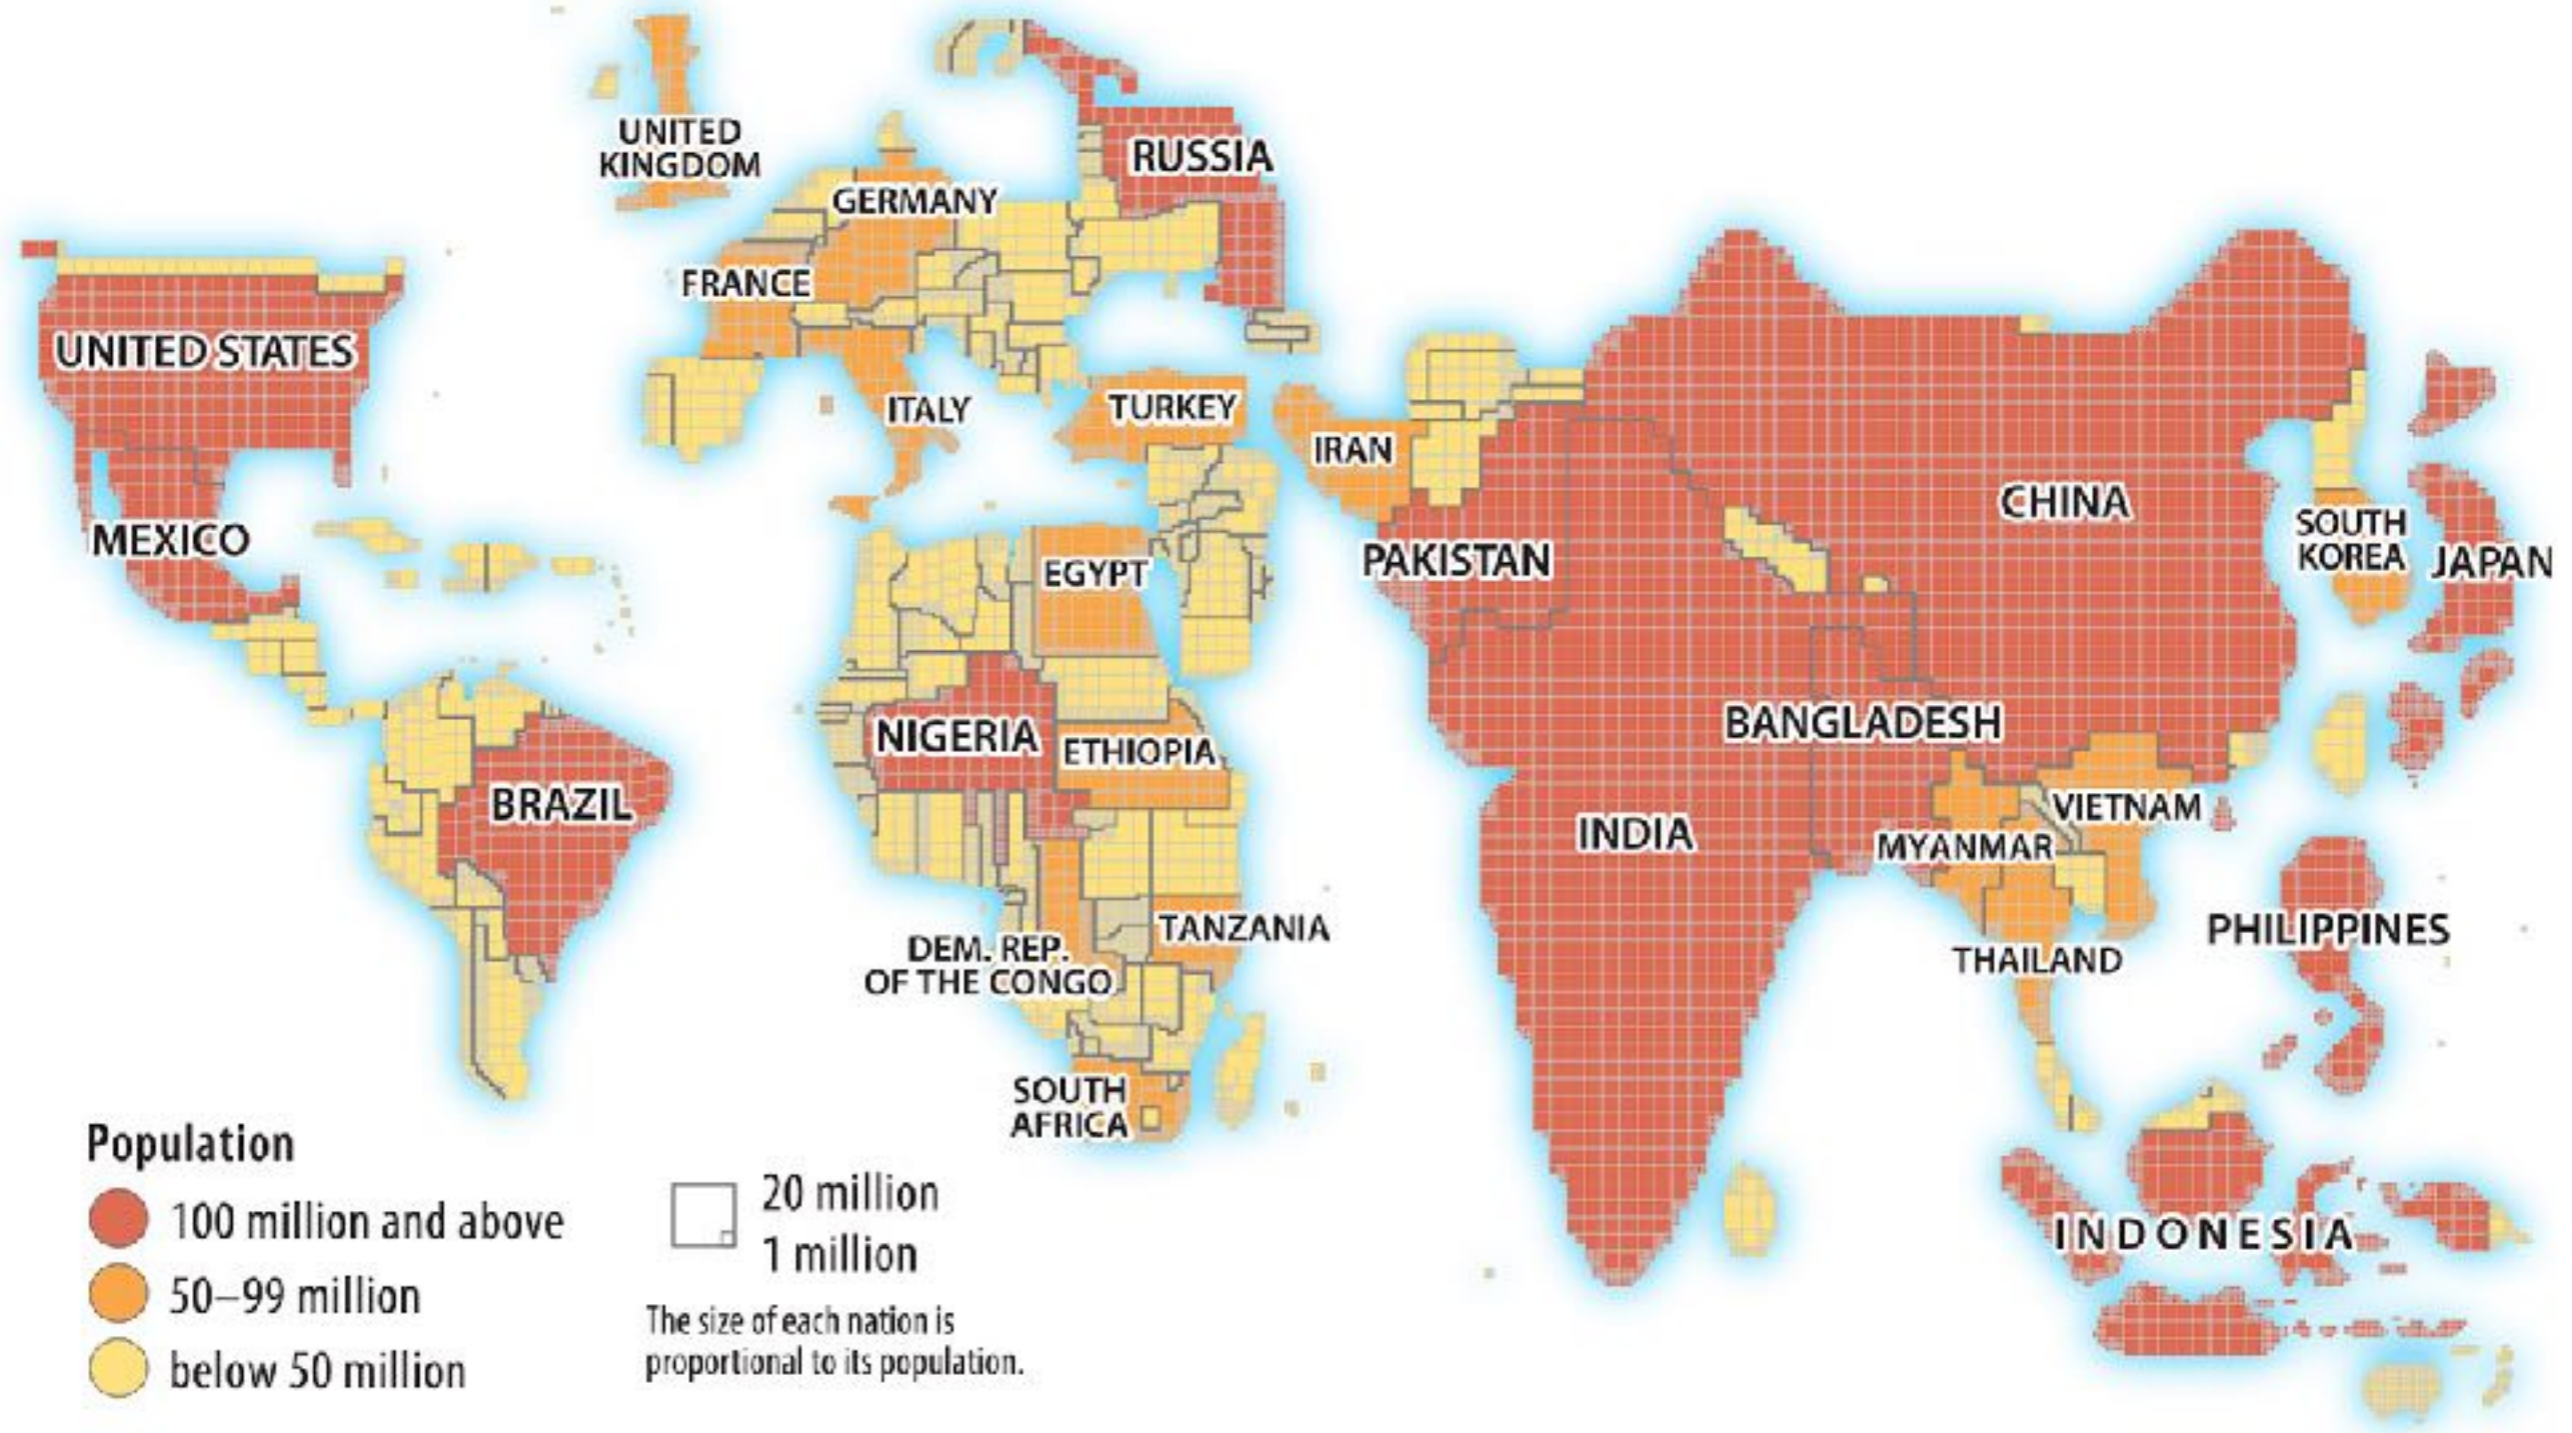

Each colored region contains approximately 1 billion inhabitants.

II. POPULATION CONCENTRATIONS

- C. There are four regions of the world with large clusters of human population:
 - East Asia (China, Japan, North & South Korea, Taiwan)
 - South Asia (India, Nepal, Bhutan, Bangladesh, Sri Lanka)
 - Southeast Asia [Myanmar (Burma), Thailand, Vietnam, Indonesia)
 - Western Europe

D. A cartogram shows the size of countries according to population rather than land area, as is the case with most maps.

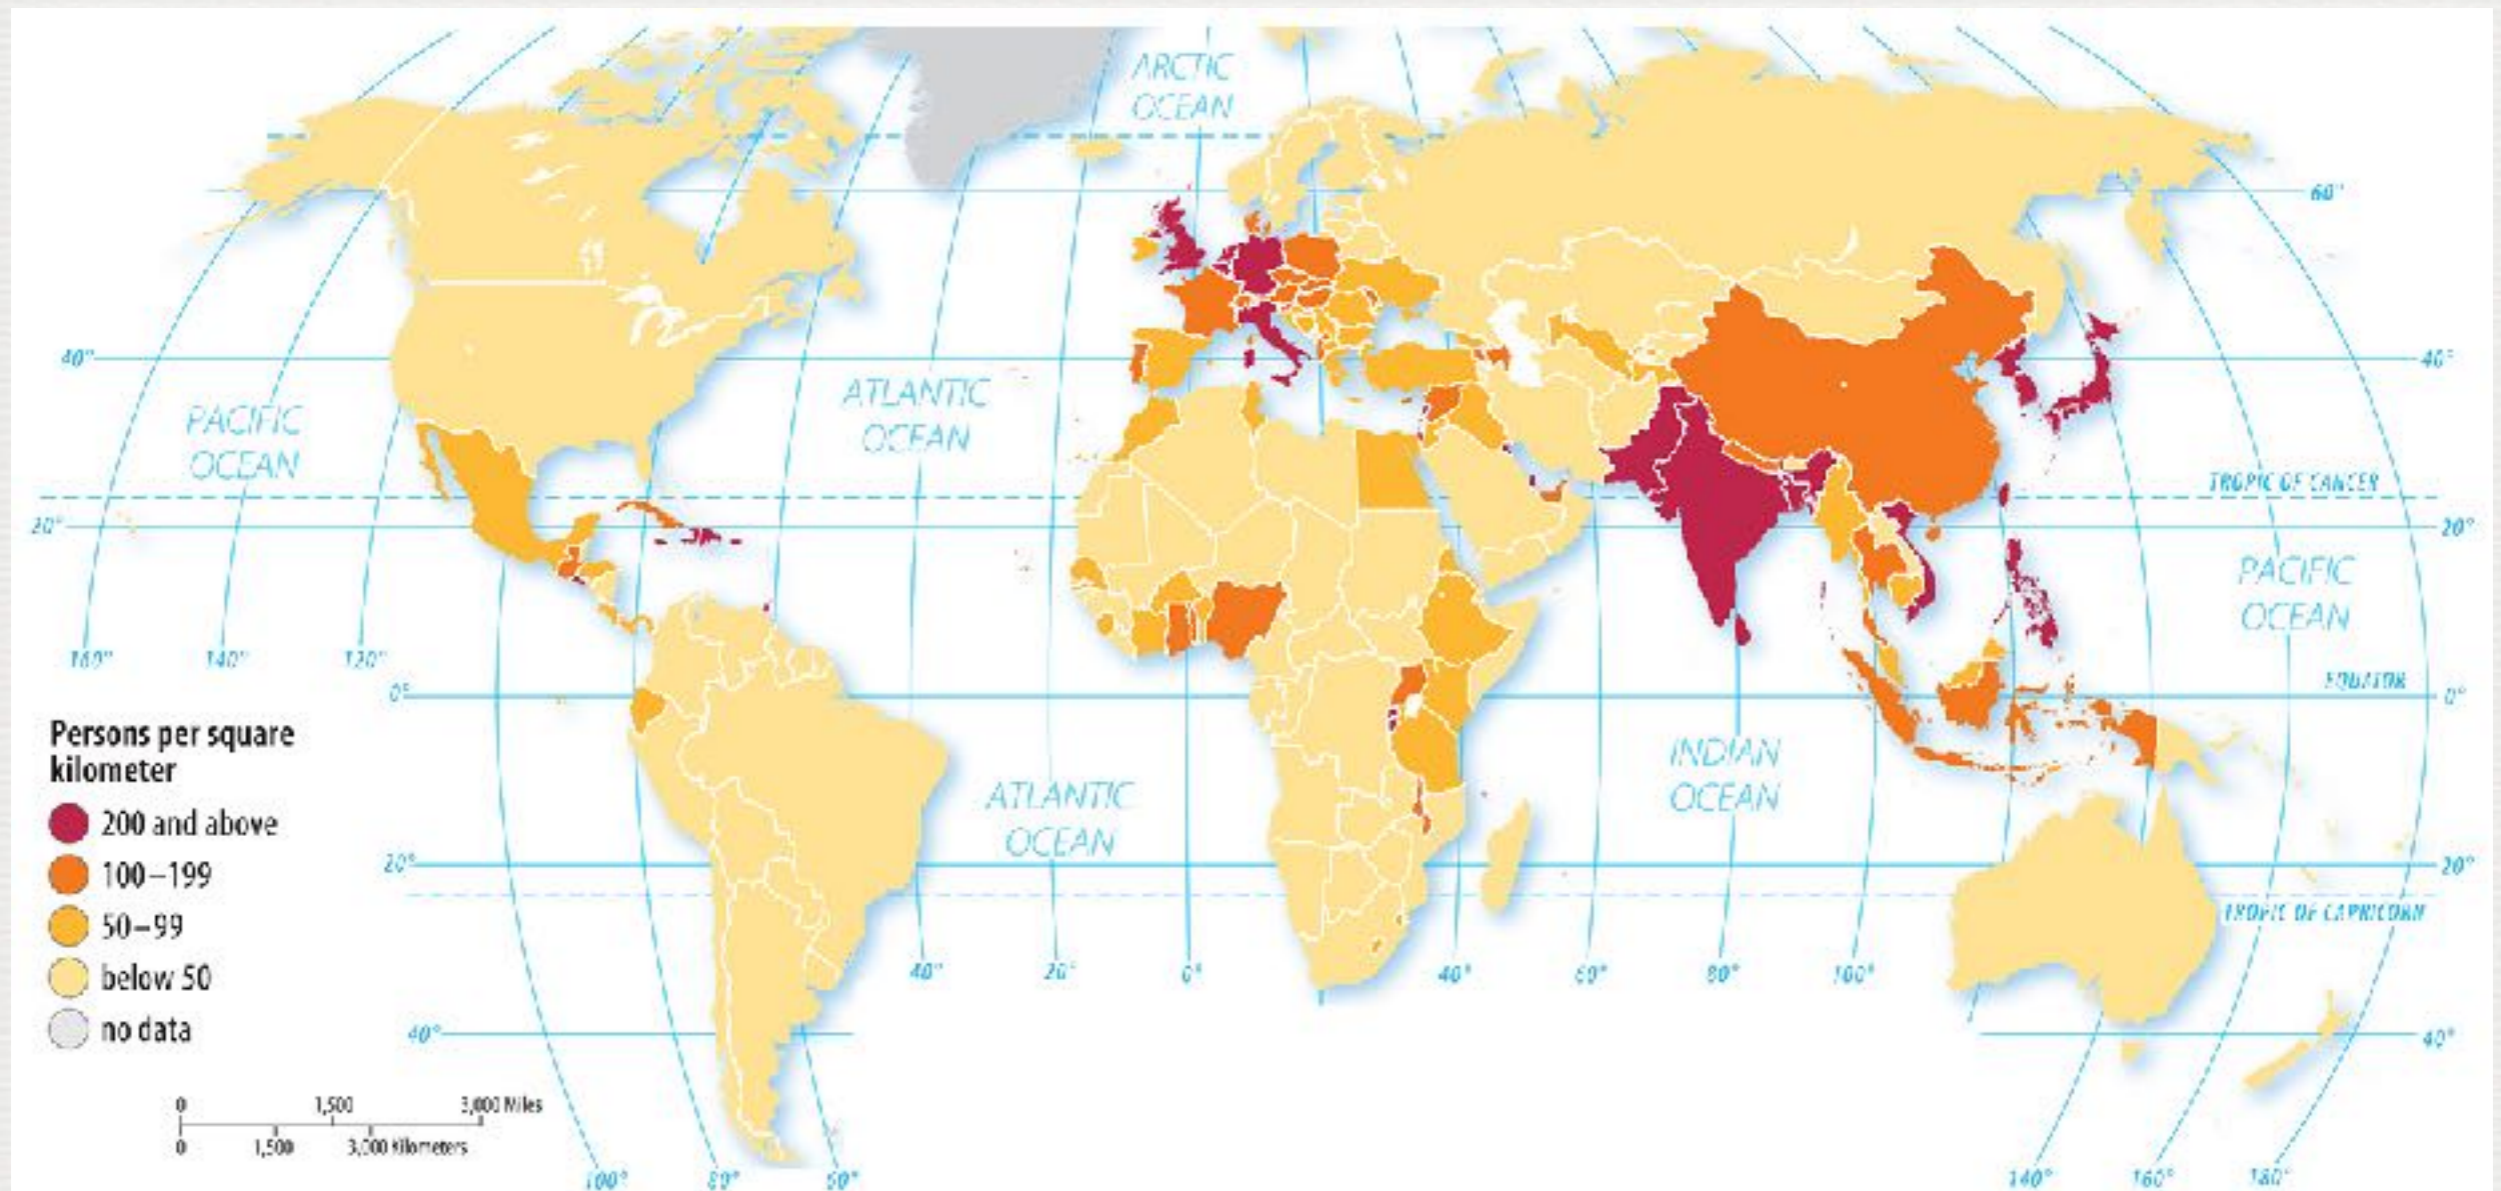

POPULATION CARTOGRAM

III. POPULATION DENSITY

- **A. Population density (Arithmetic Density)**
 - 1. The number of people occupying an area of land OR
 - the total number of persons/total land area

ARITHMETIC DENSITY

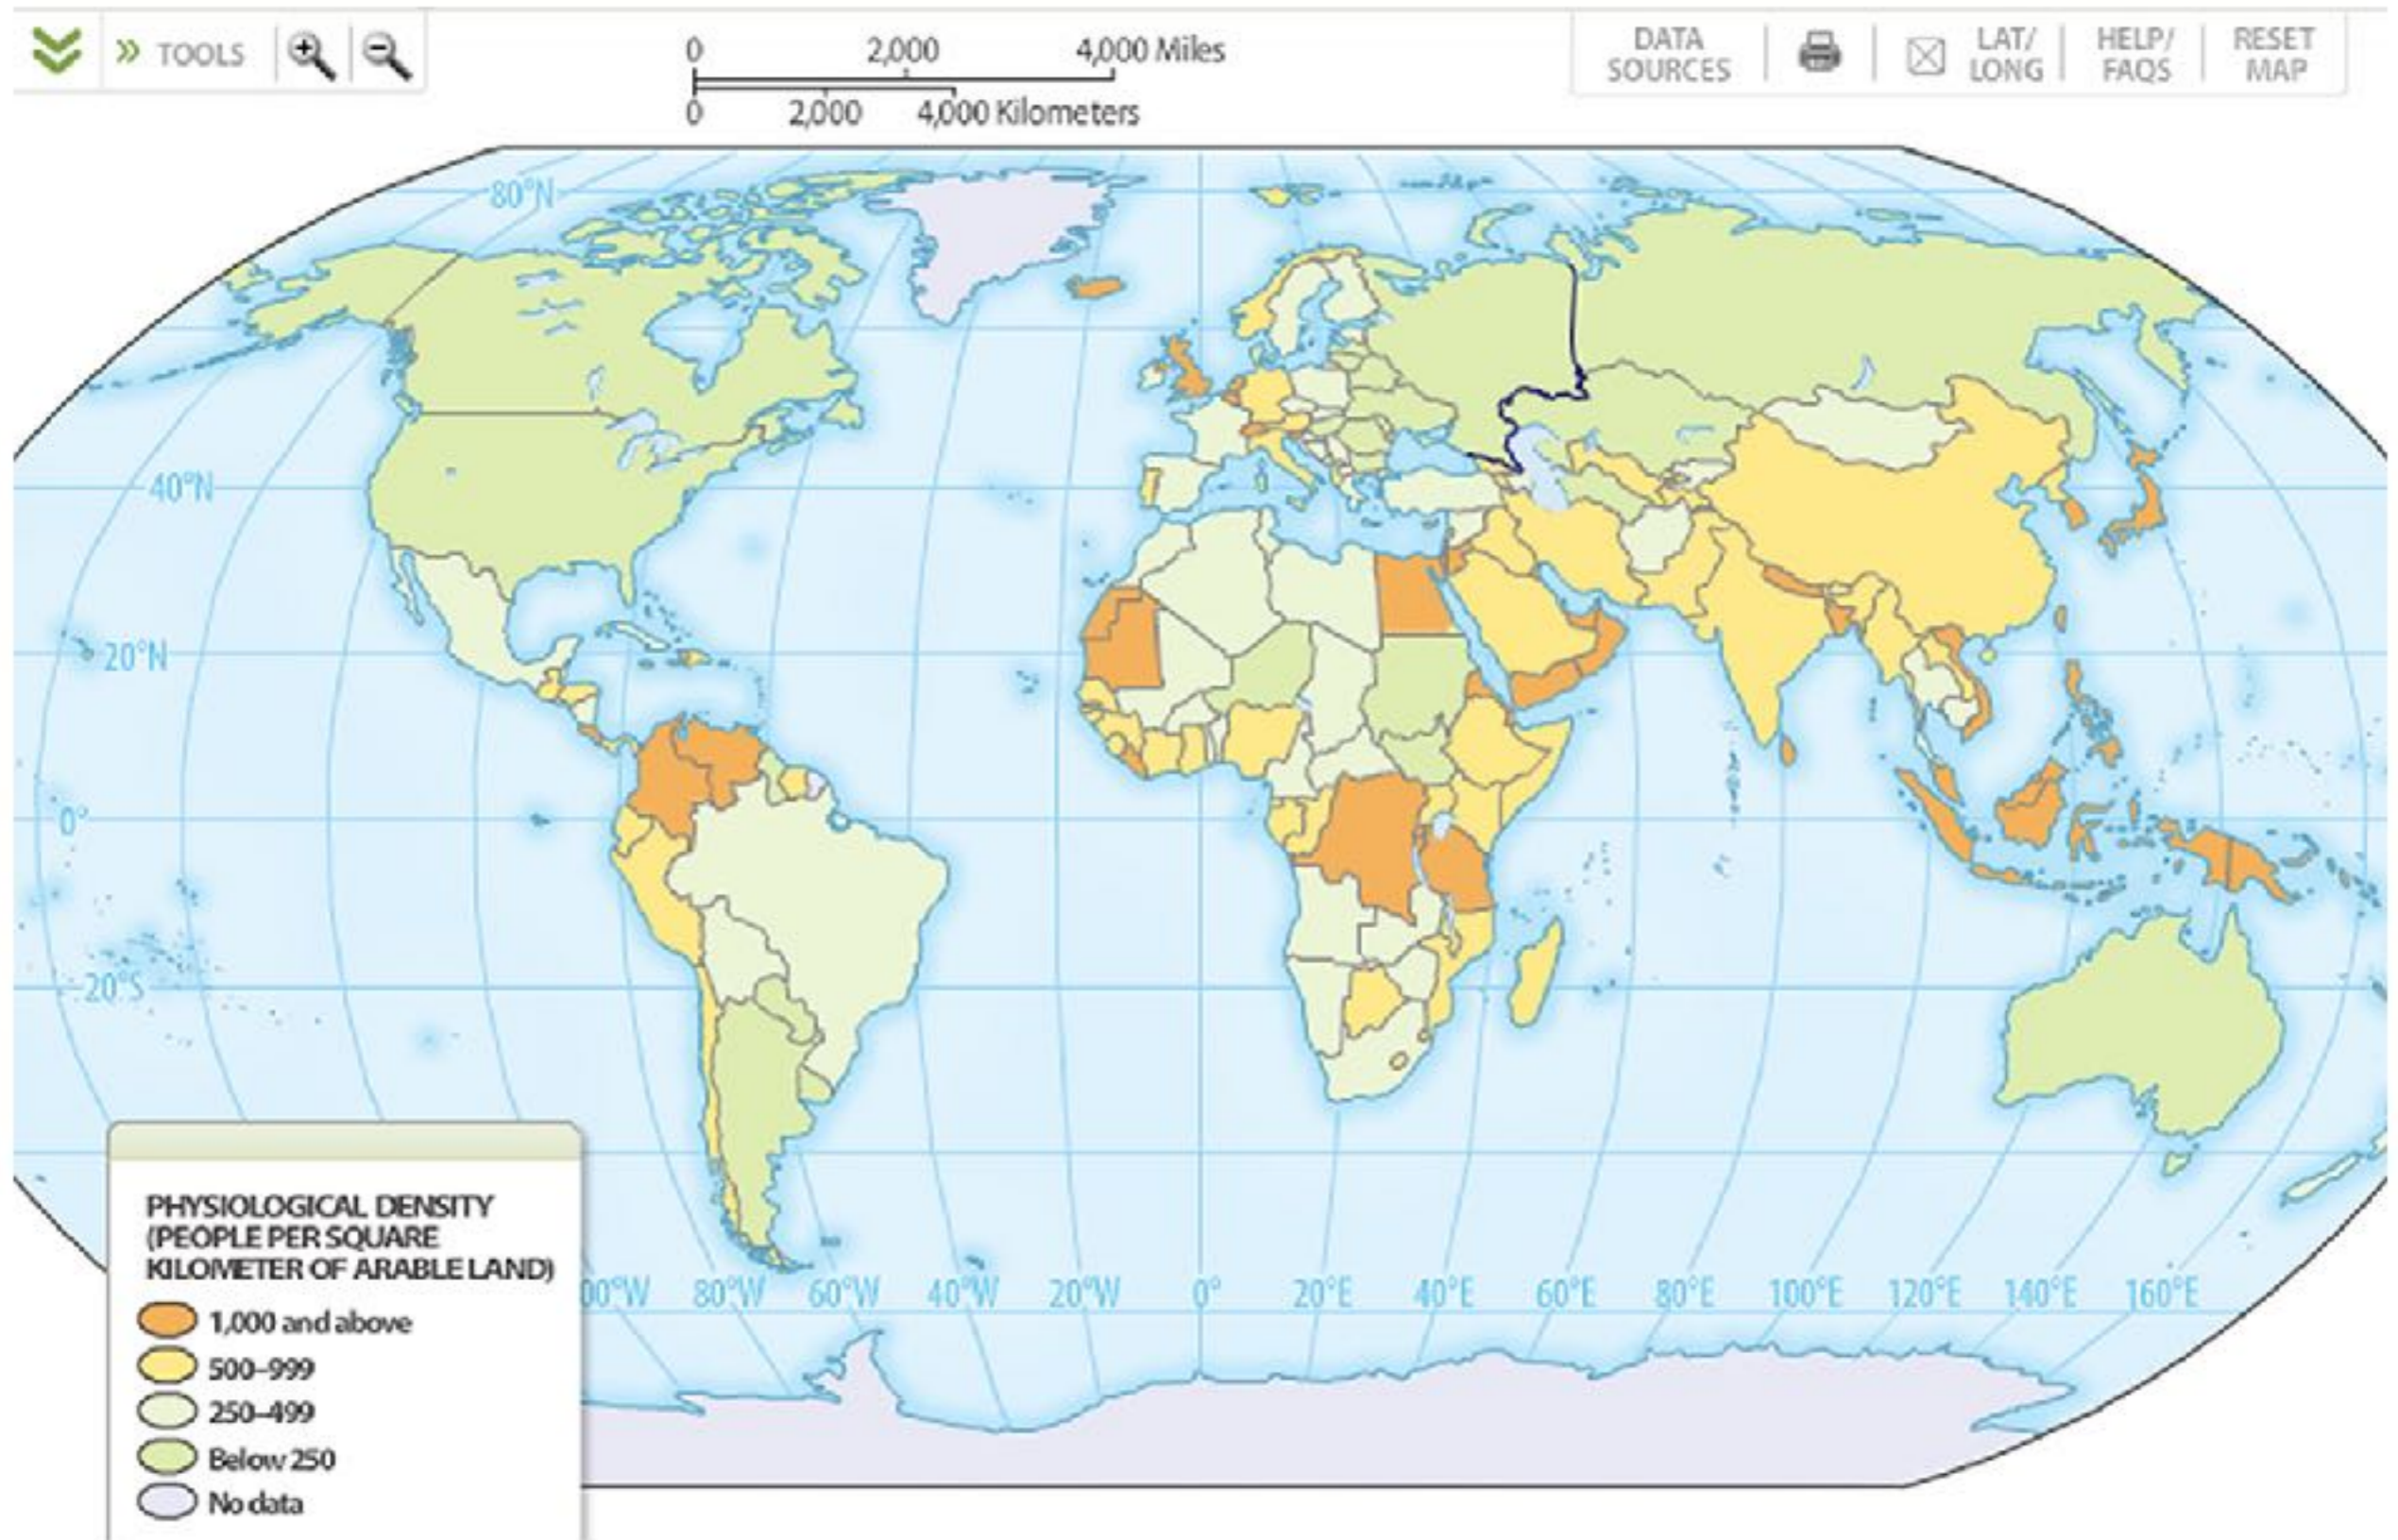

ARITHMETIC DENSITY

Country	Arithmetic Density	Physiological Density	Agricultural Density	Percentage Farmers	Percentage Arable Land
Canada	4	83	1	2	5
United States	35	199	3	2	18
The Netherlands	498	1,610	26	3	31
Egypt	87	3,011	273	29	3

III. POPULATION DENSITY

- **C. Physiological density**
 - Total number of people supported by a unit of arable (farmable) land (a more meaningful measurement)
 - By combining both arithmetic and physiological data, geographers can get a sense of the capacity of land to provide sustenance for humankind.

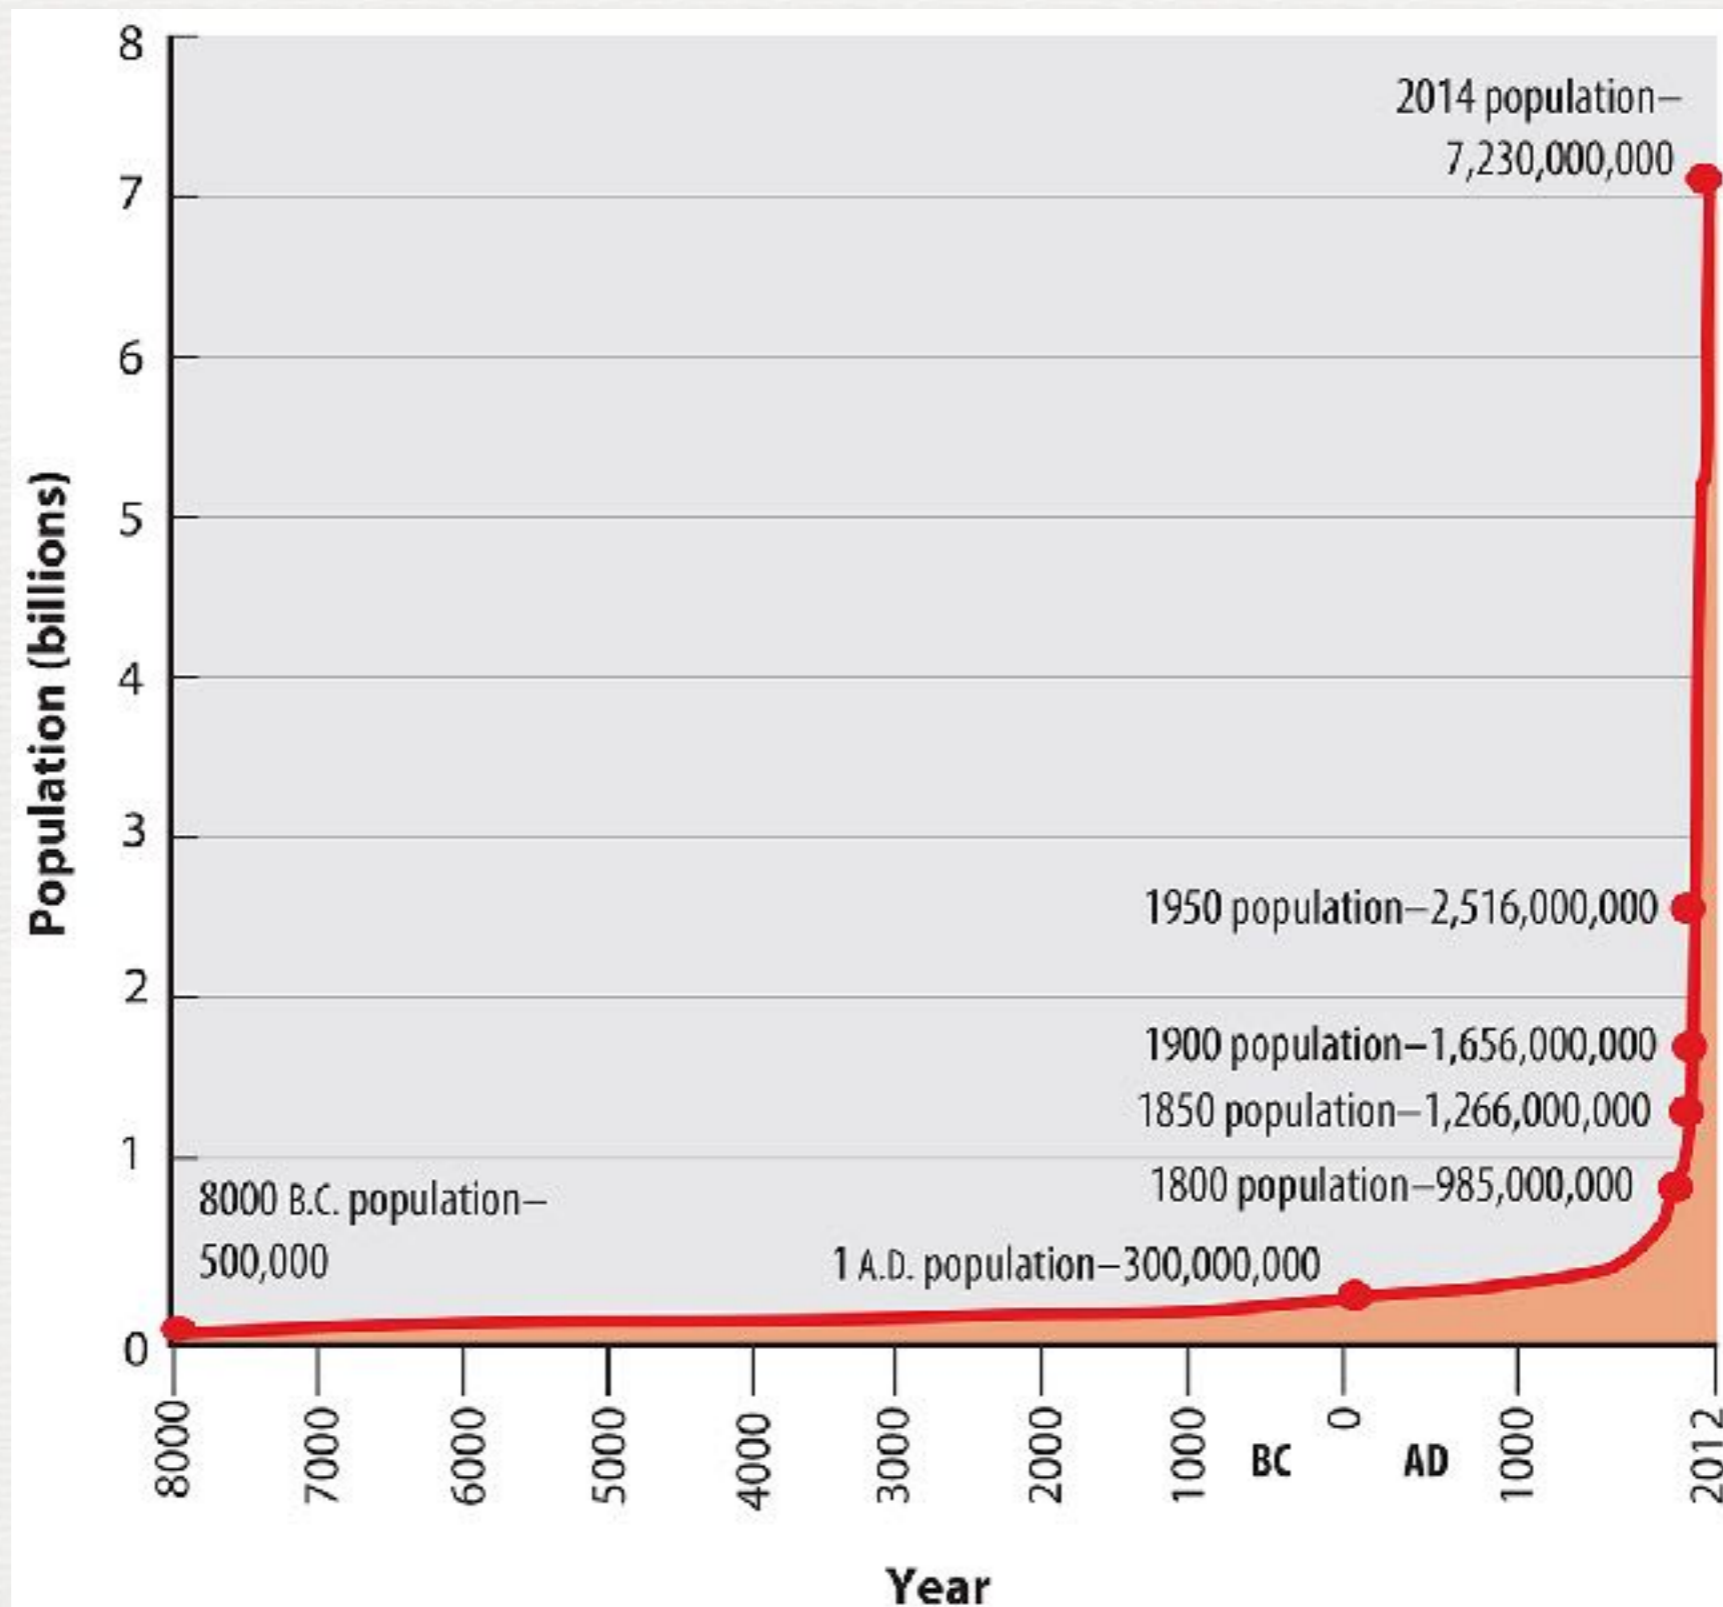

PHYSIOLOGICAL DENSITY

PHYSIOLOGICAL DENSITY

Country	Arithmetic Density	Physiological Density	Agricultural Density	Percentage Farmers	Percentage Arable Land
Canada	4	83	1	2	5
United States	35	199	3	2	18
The Netherlands	498	1,610	26	3	31
Egypt	87	3,011	273	29	3

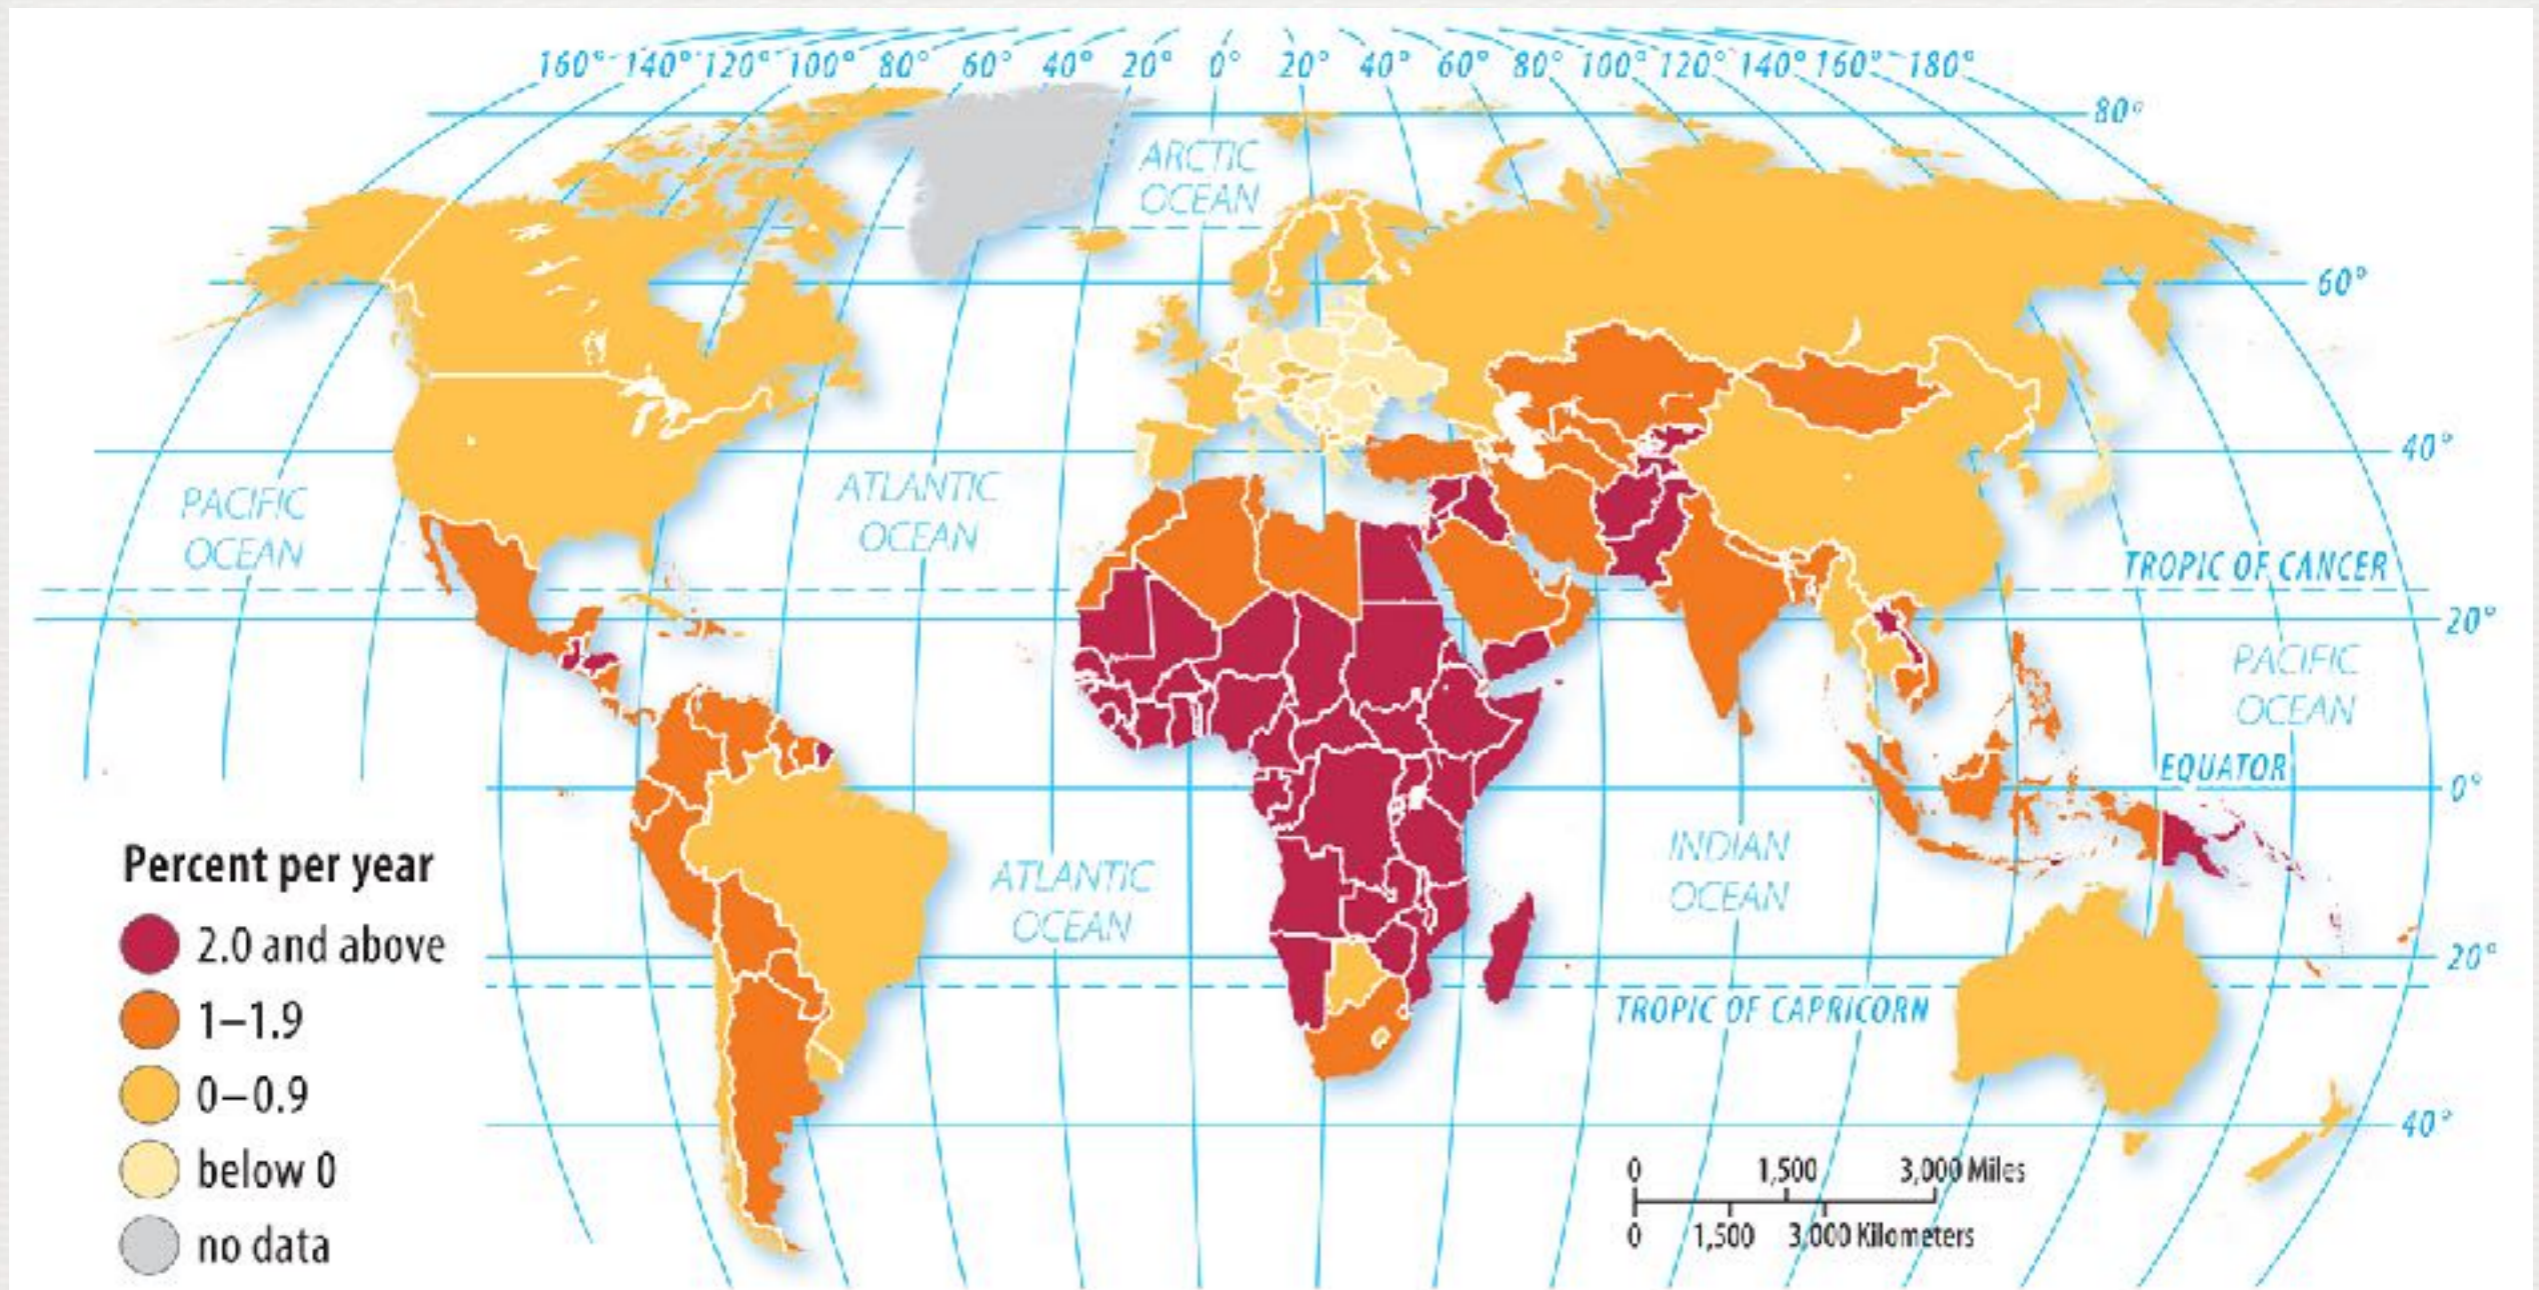

POPULATION GROWTH

IV. COMPONENTS OF CHANGE

- **A. There are three main measures of population change:**
 - **1. Natural Increase Rate (NIR)**
 - a. Percentage by which a population grows in a year
 - b. Only uses birth and death rates
 - c. Immigration and emigration are excluded

NIR

How could you have a population growth below zero???

Which regions are wealthier? Poorer?

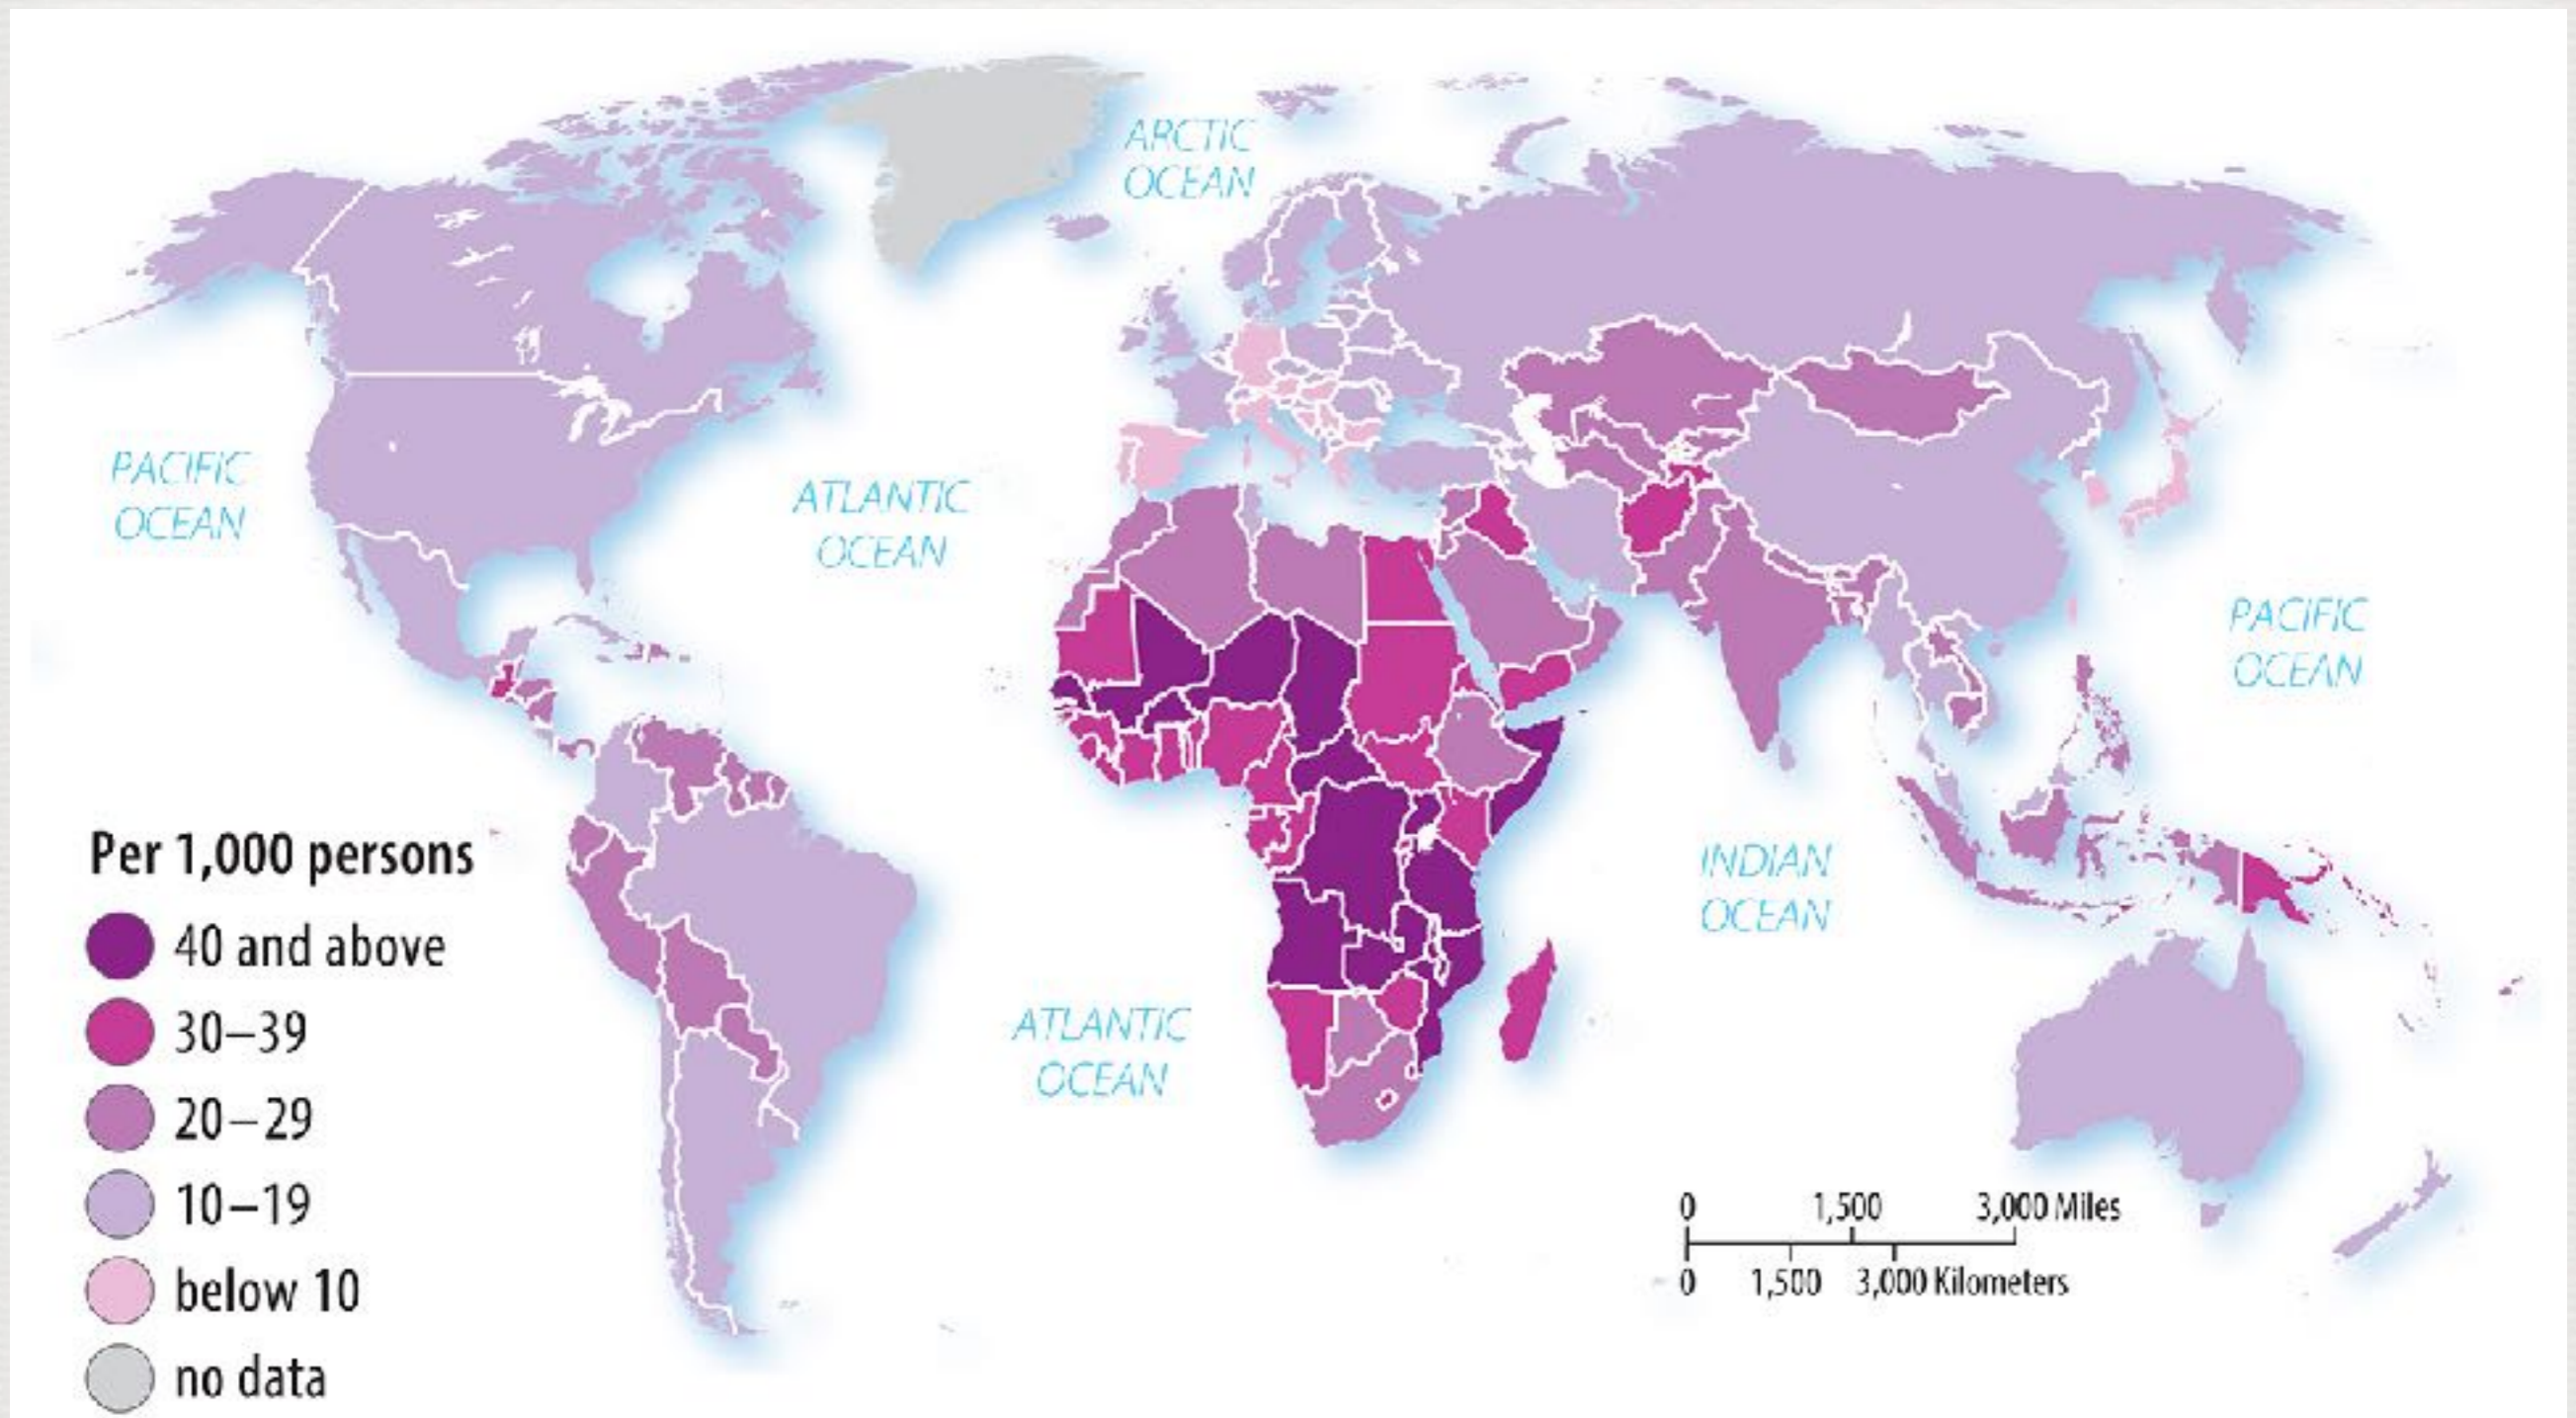

IV. COMPONENTS OF CHANGE

- **2. Crude Birth Rate (CBR)**
 - a. Total number of live births/year/1,000 people in a society

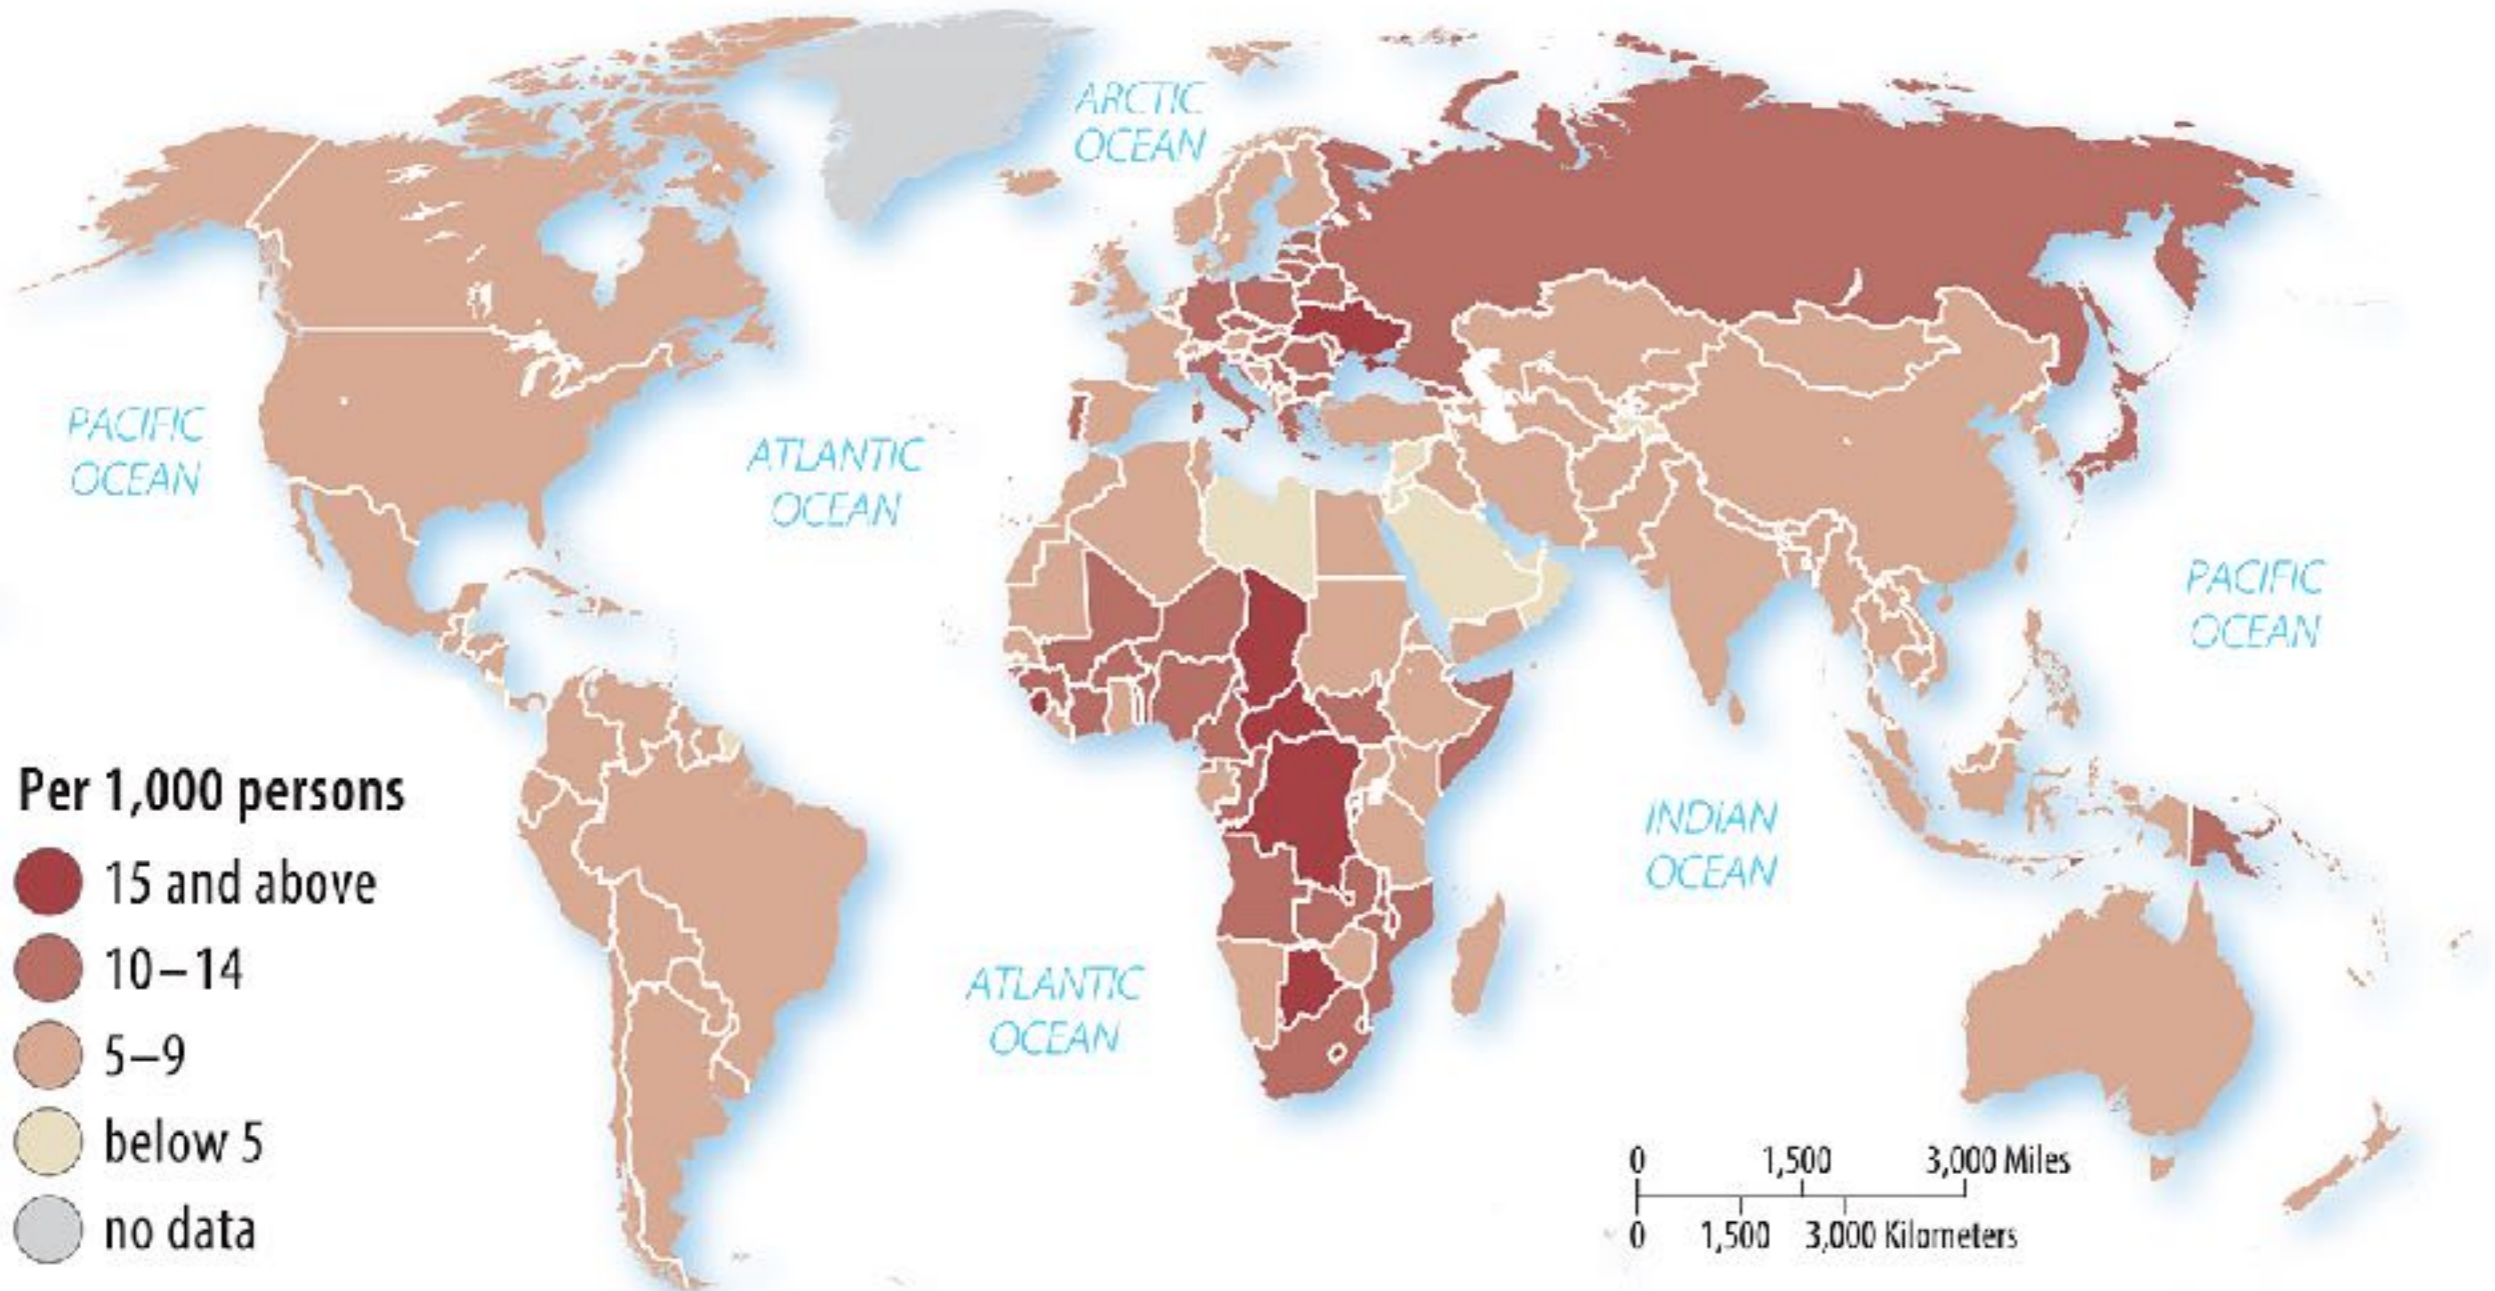

$$\text{NIR} = \text{CBR} - \text{CDR}/10$$

CRUDE BIRTH RATE

- **3. Crude Death Rate (CDR)**
 - a. Total number of deaths/year/1,000 people in a society

CRUDE DEATH RATE

CALCULATING NIR

$$\text{NIR} = \frac{\text{CBR} - \text{CDR}}{10}$$

V. THE DEMOGRAPHIC TRANSITION

- **A. Demographic transition**
 - 1. Process of change in a country's population.
 - 2. Every country is in one of the four stages of the demographic transition, each country falls in one stage or another.
 - 3. Geographers use the DT model to represent change in population structure over time.

VI. THE DEMOGRAPHIC TRANSITION

VI. THE DEMOGRAPHIC TRANSITION

- **B. Stage 1**
 - 1. Very high CBR
 - 2. Very high CDR
 - 3. Very low NIR
 - 4. No country is currently in Stage 1

VI. THE DEMOGRAPHIC TRANSITION

- **C. Stage 2 (Cape Verde Islands, Africa)**
 - 1. High CBR
 - 2. Rapidly declining CDR
 - 3. Very high NIR
 - 3rd World Countries

Third World Problems - Real Problems

VI. THE DEMOGRAPHIC TRANSITION

- **D. Stage 3 (Chile)**
 - 1. Rapidly declining CBR
 - 2. Moderately declining CDR
 - 3. Moderate NIR
 - 2nd World Country

VI. THE DEMOGRAPHIC TRANSITION

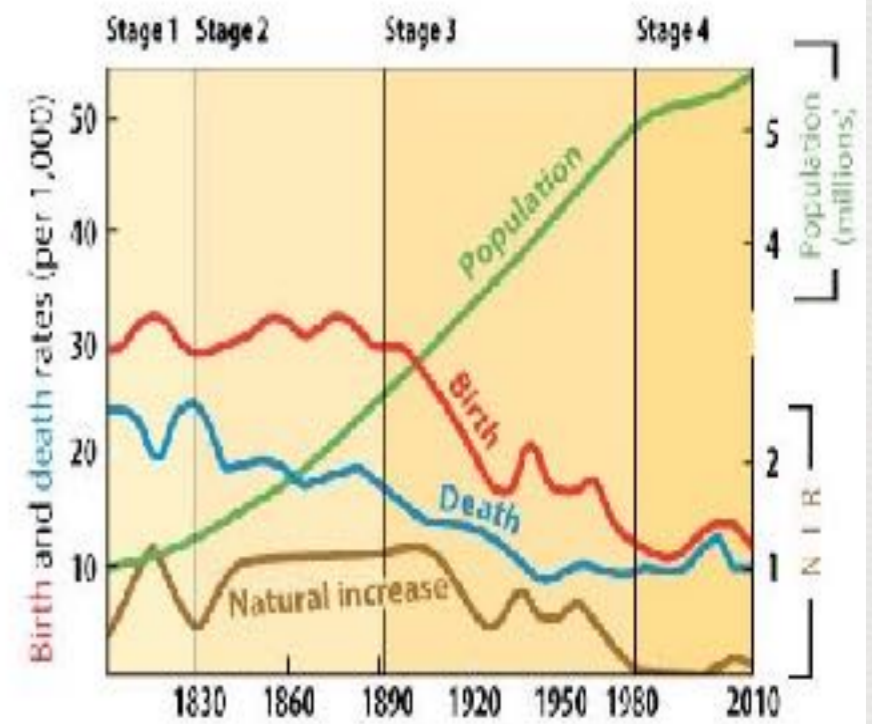

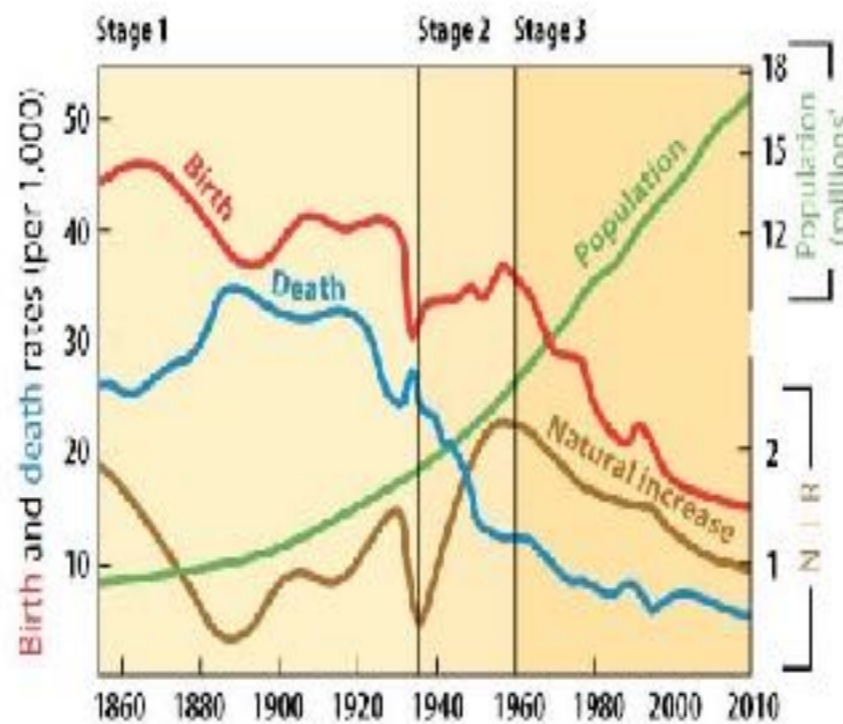

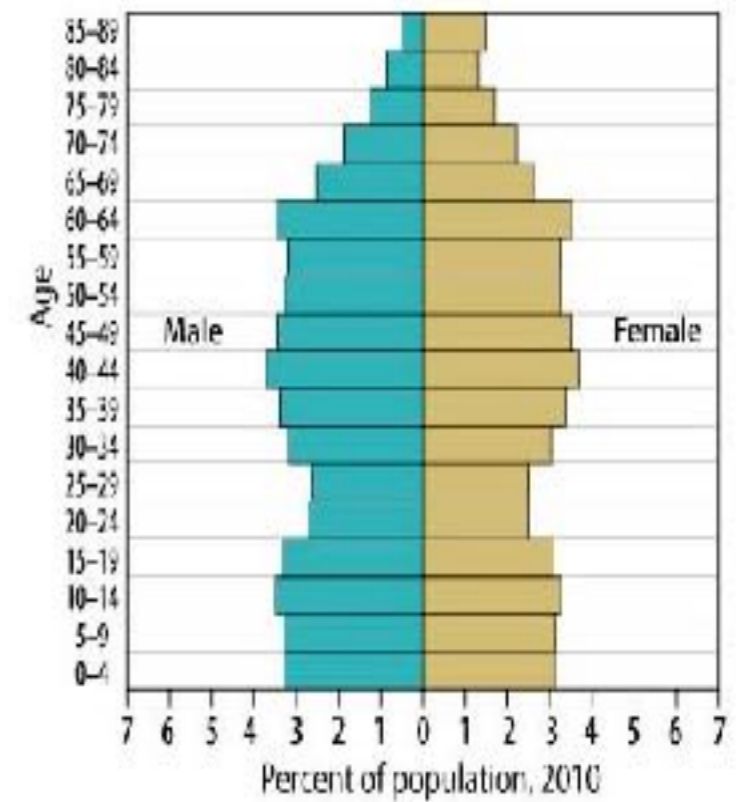

- **E. Stage 4 (Denmark)**
 - 1. Very low CBR
 - 2. Low, slightly increasing CDR
 - 3. Zero or negative NIR
 - 1st World Country

#FirstWorldProblems ... not REAL problems

POPULATION PYRAMID AND DEMOGRAPHIC TRANSITION FOR CAPE VERDE (LEFT), CHILE (CENTER), DENMARK (RIGHT)

VI. POPULATION & RESOURCES

- A. Overpopulation is a condition in which the number of people in an area exceeds the capacity of the environment to support life at a decent standard of living.
- B. Thomas Malthus (1766 - 1834) wrote "An Essay on the Principle of Population, 1798." According to Malthus:
 - 1. Population increases geometrically (exponentially)
 - 2. Resources increases arithmetically (constant rate)

THE GAMBIA: OVERPOPULATION THREAT

Today	1 person, 1 unit of food
25 years from now	2 persons, 2 units of food
50 years from now	4 persons, 3 units of food
75 years from now	8 persons, 4 units of food
100 years from now	16 persons, 5 units of food

- **3. Contemporary Malthus supporters observe that today:**
 - **a. Relatively poor countries have experienced the most rapid population growth.**
 - **(1) Little wealth in these countries to support growth**
 - **(2) World population growth is outstripping many global resources.**
 - **(3) Will result in war and other civil violence**

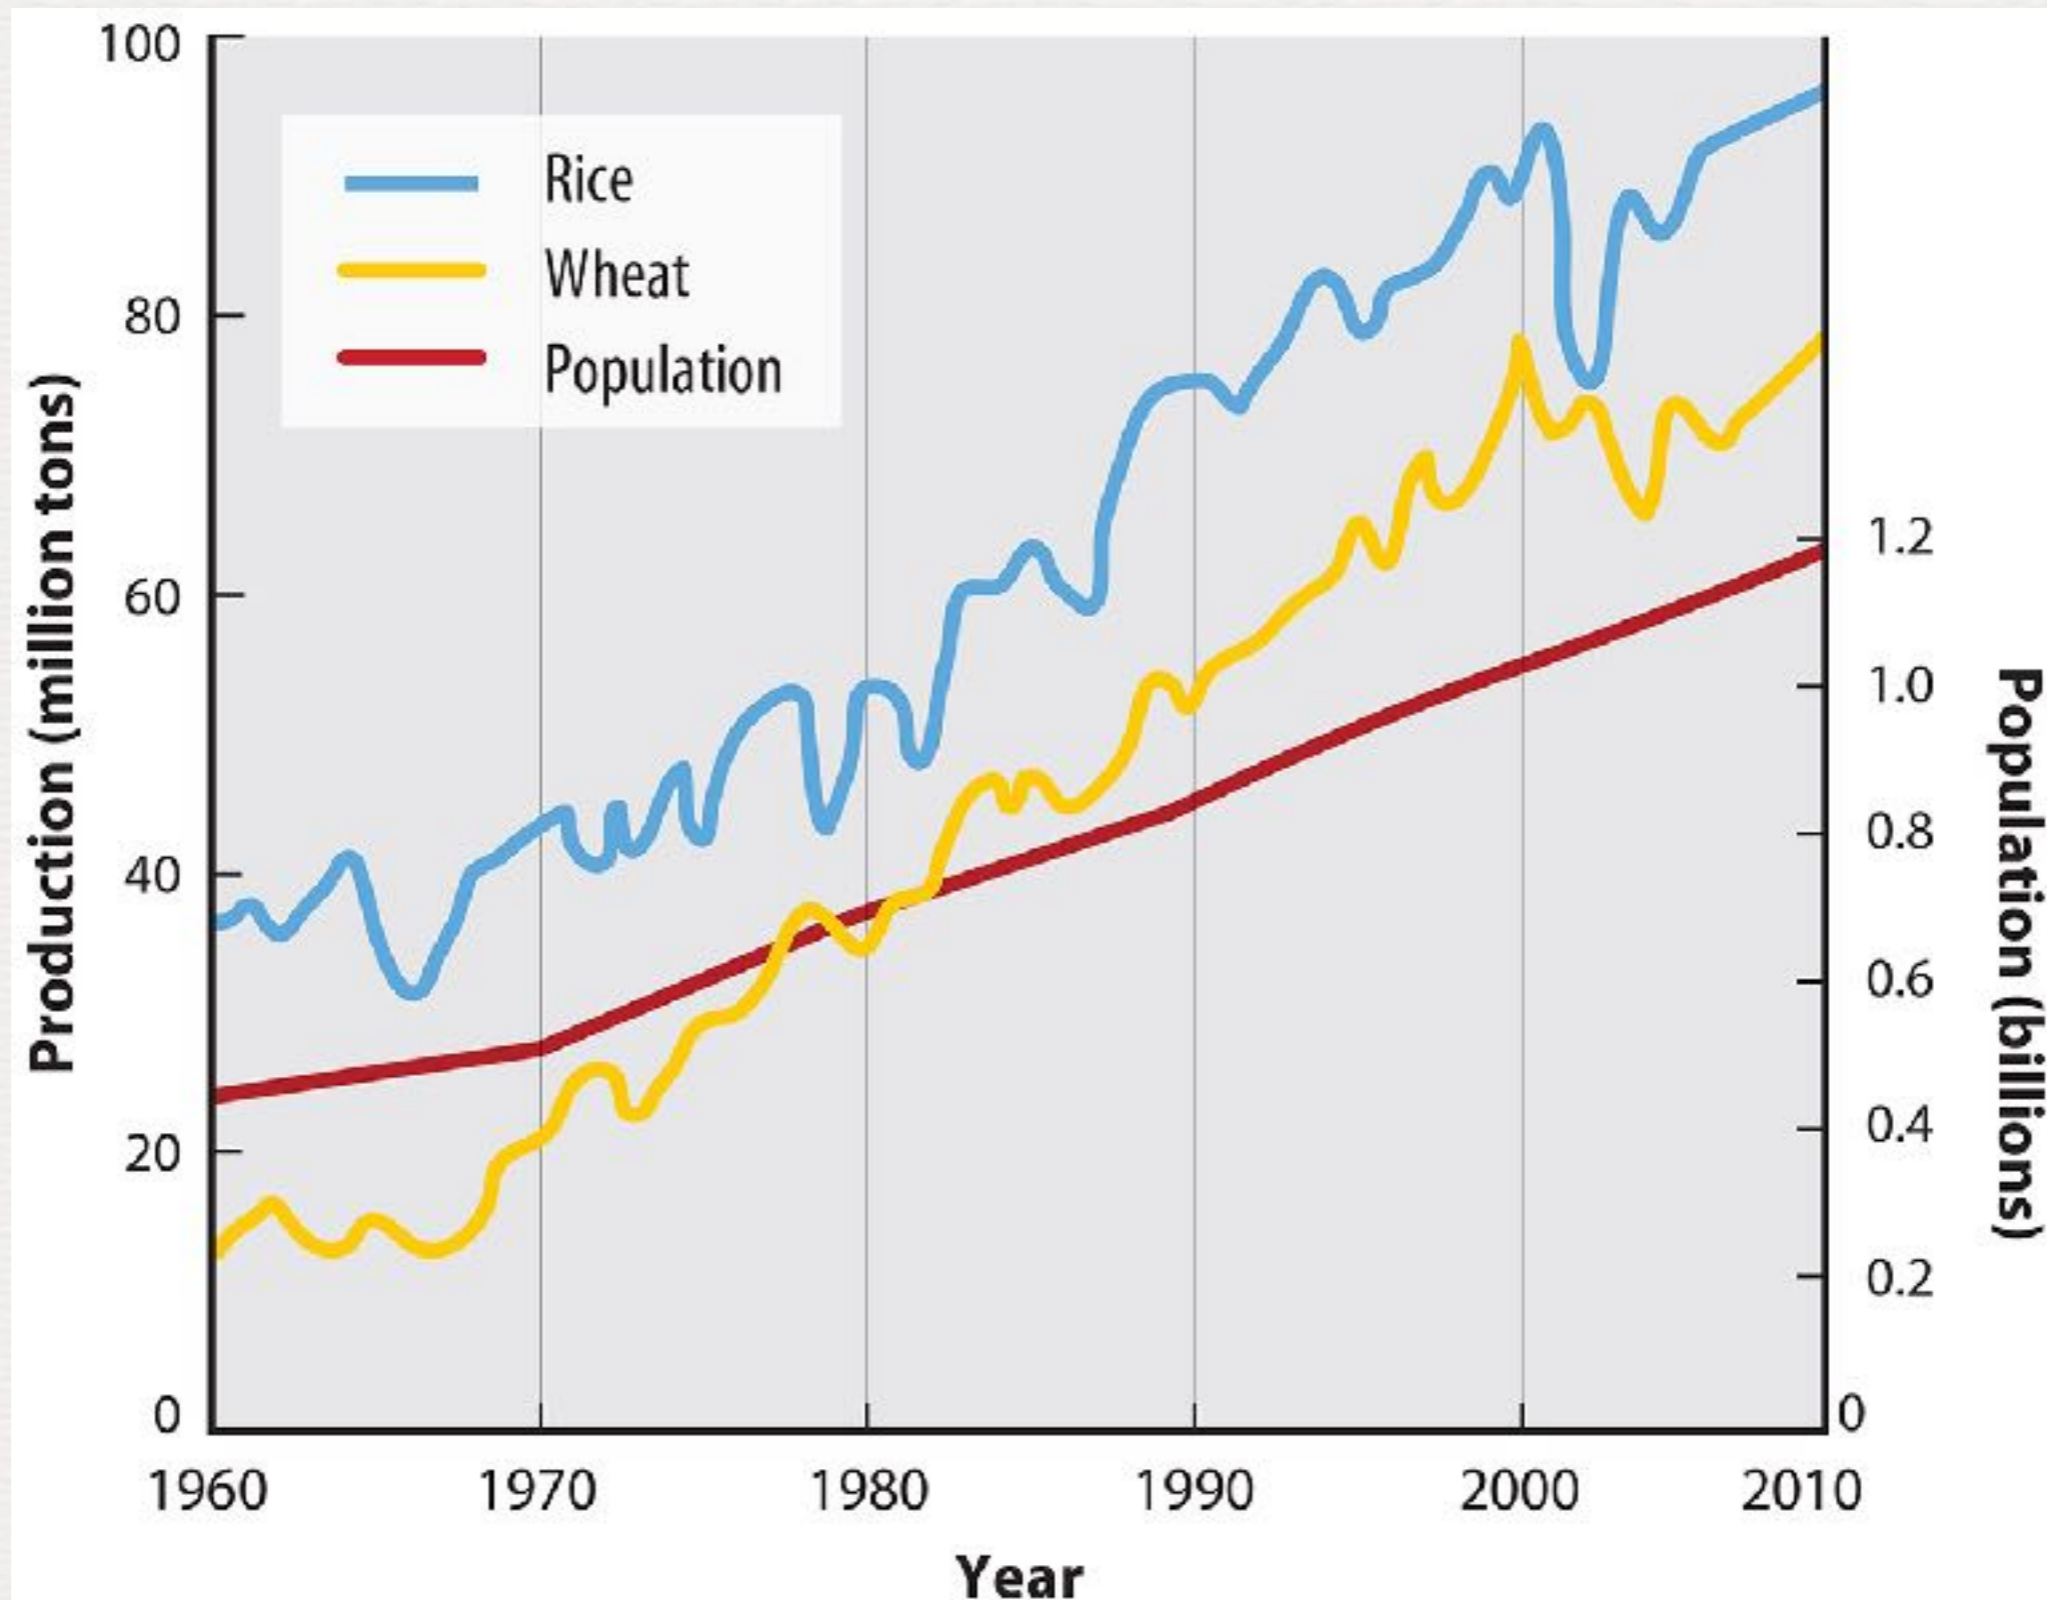

Malthus' Theory

■ 4. Malthus's Critics

- a. Argue a larger population could stimulate economic growth, food production, and technological development.
- b. Unjust social practices are to blame, not lack of resources.
- c. Some argue that high population growth leads to greater political and economic power.

Malthus' Theory Applied to India

5. Malthus's theory and reality

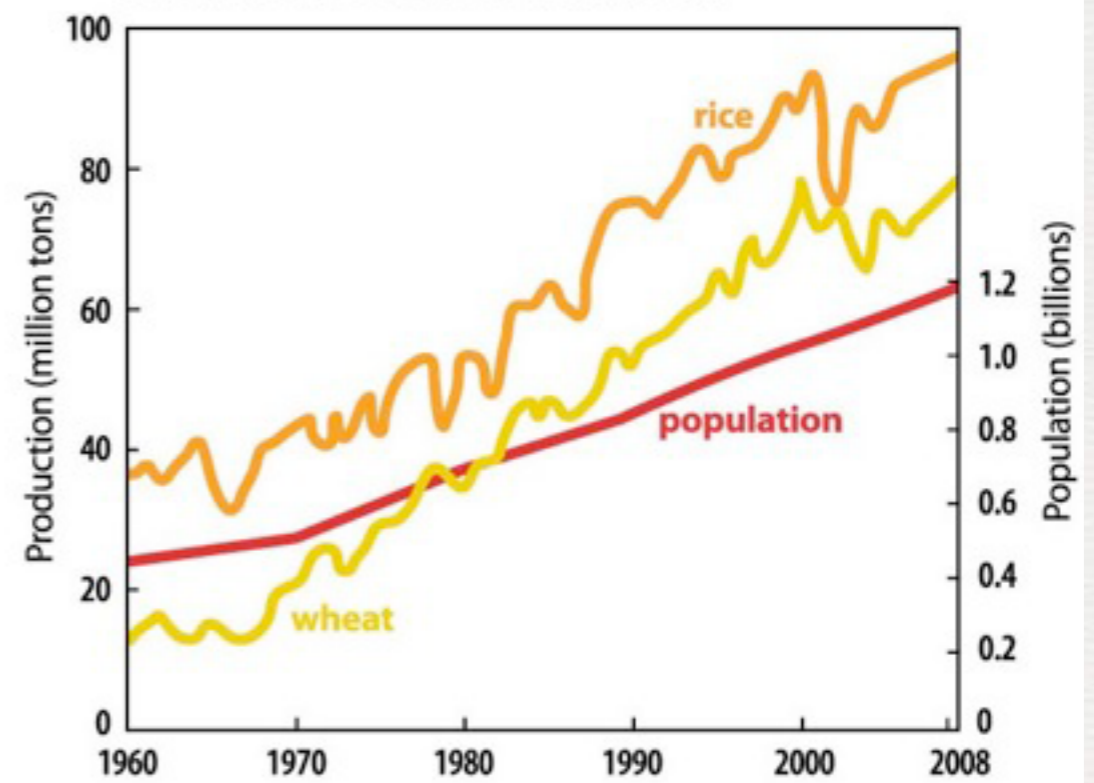

- a. Globally, Malthus's theory has not been supported during the past 50 years.**
- b. World food production has increased faster than the NIR.**
- c. Hunger and famine are distribution problems and not production problems.**
- d. Cultural, economic, and technological change has slowed population growth.**

MALTHUS'S THEORY

INDIA'S RECENT EXPERIENCE

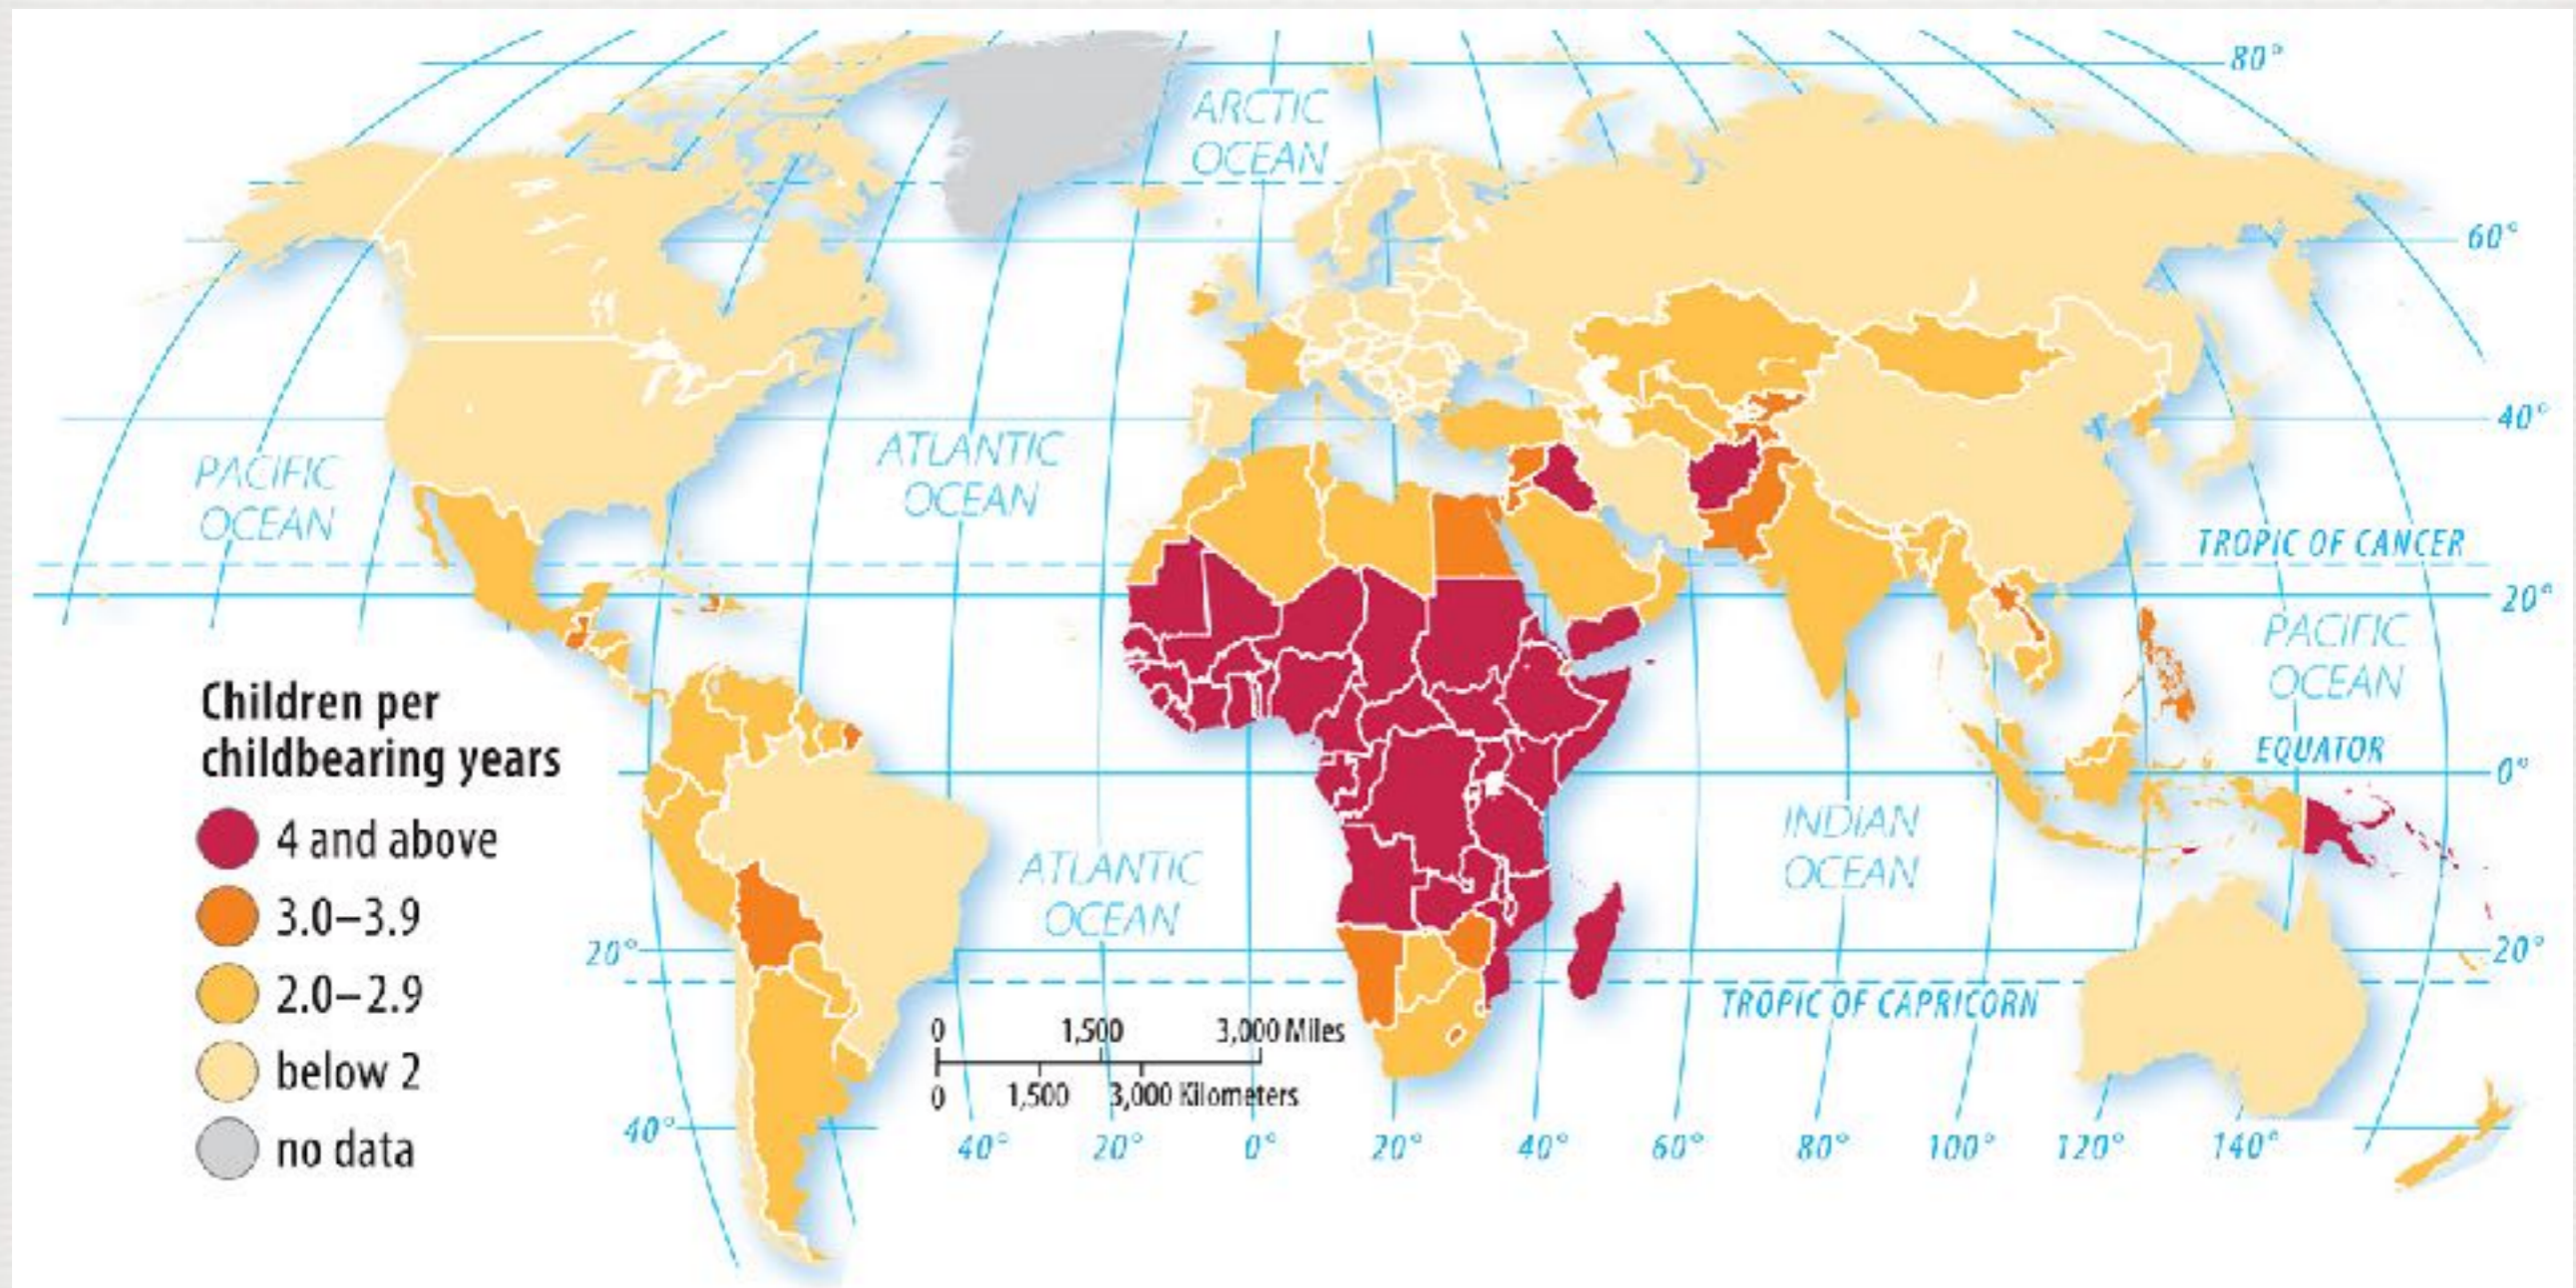

VII. POPULATION FUTURES

- **A. Demographic Transition: Possible Stage 5**
 - **Decline**
 - 1. Predicted for some developed countries.
 - 2. Characterized by:
 - a. Very low CBR
 - b. An increasing CDR
 - c. Therefore you would have a negative NIR

- **B. Total Fertility Rate (TFR)**
 - 1. Average number of children a woman will have throughout her childbearing years
 - a. Behavior predictor

TOTAL FERTILITY RATE

- **C. Japan's Future Population**

- **1. If the demographic transition is to include a stage 5, Japan will be one of the world's first countries to reach it.**
- **2. Japan faces a severe shortage of workers. Instead of increasing immigration, Japan is encouraging more Japanese people to work.**

- **D. China's Future Population**
- **1. The core of the Chinese government's family planning program has been the [One Child Policy](#), adopted in 1980.**
- **2. Since 2000, China has actually had a lower CBR than the United States.**
- **3. With the United Nations now forecasting China to lose population by 2100, the government has relaxed the One Child Policy.**

- **E. India's Future Population**
 - 1. India was the first country to embark on a national family planning program starting in 1952.
 - 2. During the 1970s India set up camps to perform sterilizations, but this resulted in widespread opposition.
 - 3. India is poised to pass China as the world's most populous country by 2030.
